Course guide
230384 - MAAP - Matrix Algebra, Accelerated Program

Unit in charge: Barcelona School of Telecommunications Engineering
Teaching unit: 739 - TSC - Department of Signal Theory and Communications.

Degree:
- MASTER'S DEGREE IN TELECOMMUNICATIONS ENGINEERING (Syllabus 2013). (Optional subject).
- MASTER'S DEGREE IN ADVANCED TELECOMMUNICATION TECHNOLOGIES (Syllabus 2019). (Optional subject).
- MASTER'S DEGREE IN CYBERSECURITY (Syllabus 2020). (Optional subject).

Academic year: 2023  ECTS Credits: 3.0  Languages: English

LECTURER
Coordinating lecturer: Consultar aquí / See here:
https://telecos.upc.edu/ca/estudis/curs-actual/professorat-responsables-coordinadors/responsables-assignatura

Others: Consultar aquí / See here:

PRIOR SKILLS
Good knowledge of first course in linear algebra. In particular, the student must be familiarized with the concepts of vectors, matrices, linear equations, inner product, determinants, vector spaces, linear independence, bases, eigenvalues and eigenvectors. These concepts will be reviewed at the beginning of the course.
Basic Matlab programming skills.

TEACHING METHODOLOGY
- Lectures.
- Presentation of a journal or conference paper previously agreed with the professor by the student.

LEARNING OBJECTIVES OF THE SUBJECT
After passing the course, the student should be able to
• use and explain some basic tools in matrix algebra;
• identify scientific problems where tools from matrix algebra can be powerful;
• apply the matrix algebra knowledge to solve and analyse the identified problems;
• combine several partial problems and solutions to solve and analyse more complex problems.

Total learning time: 75 h
### Introduction

**Description:**
Objectives, scope and organization of the course.

**Full-or-part-time:** 0h 30m
Theory classes: 0h 30m

### I. Vector spaces and basic linear algebra

**Description:**
1. Vector Spaces
2. Subspaces. Examples.
5. Basic Matrix Algebra
7. Submatrices and Partitioned Matrices.
8. Special Matrices.
9. Linear Spaces: Range and Null Subspaces, Rank of matrices and Norm of matrices.
10. Inverse Matrix, Determinant and Trace.

**Full-or-part-time:** 8h
Theory classes: 8h

### II. Eigensystems of Matrices

**Description:**
3. Eigenvalues and Eigenvectors
4. Diagonalization and Similarity Transformations.
8. SVD Decomposition and advanced topics on eigensystems
9. SVD Decomposition.

**Full-or-part-time:** 8h
Theory classes: 8h
III Linear Systems

Description:
  5.1 Existence and number of Solutions to Ax=b
  5.2 Solution of Triangular systems. Gauss Elimination.
  5.3 LU decomposition. Cholesky Decomposition

  6.1 Introduction
  6.2 QR factorization and LS solution
  6.3 SVD decomposition and LS solution.
  6.4 Weighted Least Squares Problem.
  6.5 Moore-Penrose Generalized Inverse.
  6.6 Total Least Squares Problem.

Full-or-part-time: 7h 30m
Theory classes: 7h 30m

GRADING SYSTEM

- Attendance is mandatory.
- Short individual assignments during the course (20%)
- Journal or congress paper presentation individually or in groups (40%)
- Final Exam (40%)

Note: depending on the number of enrolled students, the grading system might change after agreement with the students.
