LEARNING OBJECTIVES OF THE SUBJECT

Learning objectives of the subject:

The aim of this course is to provide students with an understanding of microprocessor-based systems and their use in instrumentation, control and communication systems. Topics covered in the course include, microprocessor architecture and organization, bus architectures, memory and I/O subsystems, timing and interfacing, peripheral controllers and programming in the 'C' language.

Learning results of the subject:

- To know how microprocessor based systems can be applied.
- To understand the architecture and operation of a microprocessor system.
- To be able to use a microprocessor development system to prepare and run a program.
- To be able to implement microprocessor-based systems, including both hardware and software, using a specific microprocessor or microcontroller
