Degree competences to which the subject contributes

Specific:
1. Ability to apply advanced knowledge in photonics, optoelectronics and high-frequency electronic
2. Ability to design and dimension transport, broadcast and distribution networks for multimedia signals
3. Ability to develop, direct, coordinate, and technical and financial management of projects in the field of: telecommunication systems, networks, infrastructures and services, including the supervision and coordination of other's subprojects; common telecommunications infrastructures in buildings or residential areas, including digital home projects; telecommunication infrastructures in transport and environment; with corresponding energy supply facilities and assessment of electromagnetic emissions and electromagnetic compatibility.
4. Ability to implement wired/wireless systems, in both fix and mobile communication environments.
5. Ability to plan networks and decision-making about services and applications taking into account: quality of service, operational and direct costs, implementation plan, supervision, security processes, scalability and maintenance. Ability to manage and assure the quality during the development process

Transversal:
6. EFFECTIVE USE OF INFORMATION RESOURCES: Managing the acquisition, structuring, analysis and display of data and information in the chosen area of specialisation and critically assessing the results obtained.
7. FOREIGN LANGUAGE: Achieving a level of spoken and written proficiency in a foreign language, preferably English, that meets the needs of the profession and the labour market.

Teaching methodology
- Lectures
- Laboratory practical work
- Individual work (distance)
- Exercises
- Short answer test (Control)
- Extended answer test (Final Exam)

Learning objectives of the subject

Learning objectives of the subject:
The aim of this course is to train students in methods of analysis, design, dimensioning and performance evaluation of optical fibre based communications systems. First, we consider the parameters of interest for systems planning using different photonic technologies as well as advanced optical signal processing models. Then, using this knowledge, we will study the design and evaluation of modern optical fibre based communication systems.

Learning results of the subject:

- Ability to dimension and design WDM high bit-rate fibre optic communication systems.
- Ability to analyse, model and implement advanced optical communication systems.
- Ability to use optical communications simulation tools to assess the results obtained from theoretical studies.

5. Advanced modulation formats for optical communications

Learning time: 27h
- Theory classes: 6h
- Laboratory classes: 3h
- Self study: 18h

Description:
- Advanced multiplexing (wavelength, time, polarization, code...)
- Single carrier advanced formats (QPSK, m-QAM, OFDM)
- Multi-carrier formats (O-OFDM, Nyquist-WDM)
- Systems analysis and evaluation

Planning of activities

LABORATORY
Description:
Design and evaluation of WDM systems using VPI Photonics.

EXERCISES
Description:
Exercises to strengthen the theoretical knowledge.

SHORT ANSWER TEST (CONTROL)
Description:
Mid term control.

SHORT ANSWER TEST (TEST)
Description:
Partial evaluation test with theoretical questions and short exercises.

EXTENDED ANSWER TEST (FINAL EXAMINATION)
Description:
Final examination.
Qualification system

Final examination: 40%
Partial examinations and controls: 20%
Exercises: 10%
Individual assessments: 5%
Group assessments: 5%
Laboratory assessments: 20%
