Coordinating unit: 230 - ETSETB - Barcelona School of Telecommunications Engineering
Teaching unit: 739 - TSC - Department of Signal Theory and Communications
Academic year: 2019
Degree: MASTER’S DEGREE IN ADVANCED TELECOMMUNICATION TECHNOLOGIES (Syllabus 2019).
(Master’s degree Optional)
MASTER’S DEGREE IN TELECOMMUNICATIONS ENGINEERING (Syllabus 2013). (Teaching unit Optional)
MASTER’S DEGREE IN INFORMATION AND COMMUNICATION TECHNOLOGIES (Syllabus 2009).
(Teaching unit Optional)
ECTS credits: 5
Teaching languages: English

Degree competences to which the subject contributes

Specific:
1. Ability to apply advanced knowledge in photonics, optoelectronics and high-frequency electronic
2. Ability to design and dimension transport, broadcast and distribution networks for multimedia signals
3. Ability to develop, direct, coordinate, and technical and financial management of projects in the field of:
telecommunication systems, networks, infrastructures and services, including the supervision and coordination of
other's subprojects; common telecommunications infrastructures in buildings or residential areas, including digital
home projects; telecommunication infrastructures in transport and environment; with corresponding energy supply
facilities and assessment of electromagnetic emissions and electromagnetic compatibility.
4. Ability to implement wired/wireless systems, in both fix and mobile communication environments.
5. Ability to plan networks and decision-making about services and applications taking into account: quality of service,
operational and direct costs, implementation plan, supervision, security processes, scalability and maintenance. Ability
to manage and assure the quality during the development process

Transversal:
6. EFFECTIVE USE OF INFORMATION RESOURCES: Managing the acquisition, structuring, analysis and display of data
and information in the chosen area of specialisation and critically assessing the results obtained.
7. FOREIGN LANGUAGE: Achieving a level of spoken and written proficiency in a foreign language, preferably English,
that meets the needs of the profession and the labour market.

Teaching methodology
- Lectures
- Laboratory practical work
- Individual work (distance)
- Exercises
- Short answer test (Control)
- Extended answer test (Final Exam)

Learning objectives of the subject
Learning objectives of the subject:

The aim of this course is to train students in methods of analysis, design, dimensioning and performance evaluation of optical fibre based communications systems. First, we consider the parameters of interest for systems planning using different photonic technologies as well as advanced optical signal processing models. Then, using this knowledge, we will study the design and evaluation of modern optical fibre based communication systems.

Learning results of the subject:

- Ability to dimension and design WDM high bit-rate fibre optic communication systems.
- Ability to analyse, model and implement advanced optical communication systems.
- Ability to use optical communications simulation tools to assess the results obtained from theoretical studies.

## 1. Introduction

**Learning time:** 11h  
Theory classes: 2h  
Self study: 9h  

**Description:**  
- Historical evolution of optical fibre communications  
- State of the art

## 2. WDM fundamentals

**Learning time:** 32h  
Theory classes: 6h  
Laboratory classes: 4h  
Self study: 22h  

**Description:**  
- Optical devices for WDM communications  
- Long haul and metro WDM systems  
- WDM systems analysis, design and performance evaluation

## 3. Advanced Optical amplification

**Learning time:** 27h  
Theory classes: 6h  
Laboratory classes: 3h  
Self study: 18h  

**Description:**  
- Doped Fiber Amplifiers  
- Semiconductor Optical Amplifiers  
- Raman Amplifiers  
- Optical amplification in WDM communication systems

## 4. Optical fibre propagation effects

**Learning time:** 28h  
Theory classes: 6h  
Laboratory classes: 3h  
Self study: 19h  

**Description:**  
- Chromatic and Polarization Mode Dispersion  
- Non-linear effects in optical fibres  
- Compensation (optically and electrically) of propagation effects.
### 5. Advanced modulation formats for optical communications

**Learning time:** 27h  
- Theory classes: 6h  
- Laboratory classes: 3h  
- Self study: 18h

**Description:**  
- Advanced multiplexing (wavelength, time, polarization, code...)  
- Single carrier advanced formats (QPSK, m-QAM, OFDM)  
- Multi-carrier formats (O-OFDM, Nyquist-WDM)  
- Systems analysis and evaluation

### Planning of activities

| LABORATORY | Hours: 10h  
Laboratory classes: 10h |
