Course guides
230657 - CTA - Control Theory and Applications

Unit in charge: Barcelona School of Telecommunications Engineering
Teaching unit: 710 - EEL - Department of Electronic Engineering.

Degree:
MASTER'S DEGREE IN ELECTRONIC ENGINEERING (Syllabus 2013). (Optional subject).
MASTER'S DEGREE IN TELECOMMUNICATIONS ENGINEERING (Syllabus 2013). (Optional subject).
MASTER'S DEGREE IN ADVANCED TELECOMMUNICATION TECHNOLOGIES (Syllabus 2019). (Optional subject).

Academic year: 2020  ECTS Credits: 5.0  Languages: English

LECTURER

Coordinating lecturer: DOMINGO BIEL, FRANCESC GUINJOAN
Others: ALBERTO POVEDA, EDUARD ALARCÓN

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Transversal:
1. EFFECTIVE USE OF INFORMATION RESOURCES: Managing the acquisition, structuring, analysis and display of data and information in the chosen area of specialisation and critically assessing the results obtained.

2. FOREIGN LANGUAGE: Achieving a level of spoken and written proficiency in a foreign language, preferably English, that meets the needs of the profession and the labour market.

TEACHING METHODOLOGY

- Lectures
- Laboratory classes
- Exercises
- Other activities
- Extended answer test (Final Exam)

LEARNING OBJECTIVES OF THE SUBJECT

Learning objectives of the subject:

The aim of this course is to introduce the students in time-domain and frequency-domain methods used to analyse and design linear control systems in both continuous and discrete-time fields.

Learning results of the subject:

- Ability to understand the basic concepts related to feedback system in both continuous-time and discrete-time fields.
- Ability to apply the root locus technique and the Routh stability criteria for the analysis of control systems.
- Ability to design the proper controllers to verify some control specifications in both time-domain and frequency domain.

**Total learning time:** 125 h

### CONTENTS

1. **Introduction to linear control systems**
   - **Description:**
     - Basic components of a control system, reference, control, output and disturbance signals.
     - Control system goals.
     - Continuous-time control and discrete-time control.
     - Dynamic systems classification: linear and nonlinear systems, time-varying and time-invariant systems.
     - Transfer function of linear systems.
   - **Full-or-part-time:** 10h
     - Theory classes: 2h
     - Self study : 8h

2. **Continuous-time control systems analysis**
   - **Description:**
     - Transient and steady-state time-response of linear systems.
     - First and second-order systems.
     - Transient response characterization: settling time, maximum overshoot, etc.
     - Higher order systems: transient response approximation through dominant poles and zero-pole cancellation.
     - Routh-Hurwitz stability criteria.
     - Root locus analysis.
     - Steady-state error.
   - **Full-or-part-time:** 24h
     - Theory classes: 6h
     - Self study : 18h

3. **Continuous-time control systems design**
   - **Description:**
     - Control design through root locus.
     - First and second-order controllers.
     - PID controllers.
     - Implementation issues of PID controllers.
   - **Full-or-part-time:** 28h
     - Theory classes: 6h
     - Laboratory classes: 6h
     - Self study : 16h
4. Analysis of control systems in frequency domain

Description:
- Frequency response of linear systems.
- Nyquist diagram and Bode diagram.
- Relative stability: gain margin and phase margin.

Full-or-part-time: 9h
Theory classes: 3h
Self study: 6h

5. Frequency-domain control design

Description:
- Frequency-domain specifications: relative stability margins and bandwidth of a control system.
- Lead-lag and phase-lag compensations.

Full-or-part-time: 24h
Theory classes: 5h
Laboratory classes: 2h
Self study: 17h

6. Discrete-time control systems

Description:
- Introduction to discrete-time control systems.
- The Z transform.
- Z Plane analysis of discrete-time systems.
- Design of discrete-time control systems by conventional methods.

Full-or-part-time: 30h
Theory classes: 4h
Laboratory classes: 5h
Self study: 21h

ACTIVITIES

LECTURES

EXERCISES

Description:
Exercises to strengthen the theoretical knowledge.

OTHER ACTIVITIES

Description:
Numerical simulation homework
EXTENDED ANSWER TEST (FINAL EXAM)

Description:
Final examination.

GRADING SYSTEM

Mid course exam (50%)
Final exam (50%)
