## Teaching staff

- **Coordinator:** Salazar Soler, Jorge
- **Others:** Chavez Dominguez, Juan Antonio
  Turo Peroy, Antonio

## Degree competences to which the subject contributes

**Transversal:**

1. EFFECTIVE USE OF INFORMATION RESOURCES: Managing the acquisition, structuring, analysis and display of data and information in the chosen area of specialisation and critically assessing the results obtained.
2. FOREIGN LANGUAGE: Achieving a level of spoken and written proficiency in a foreign language, preferably English, that meets the needs of the profession and the labour market.

## Teaching methodology

- Lectures
- Application classes
- Laboratory practical work
- Individual work (distance)
- Exercises
- Oral presentations
- Extended answer test (Final Exam)

## Learning objectives of the subject

The aim of this course is to train students in the design, dimensioning and evaluation of ultrasonic systems. The course starts with the basics of waves and stops at the detailed treatment of complete ultrasonic systems putting considerable emphasis on the specific instrumentation and the applications.

**Learning results of the subject**

- Understanding the general principles, the instrumentation involved and the operation of systems based on ultrasonic waves.
- Ability to design, implement and operate ultrasonic systems.
- Ability to conceive and design electronic circuits for generating and processing ultrasonic signals.
- Ability to analyse, design and evaluate the operation of electromechanical devices used in ultrasonic systems.
- Ability to develop and evaluate ultrasonic measurement techniques for new applications.

### Study load

</thead>
<tbody>
<tr>
<td><strong>1. Introduction</strong></td>
<td><strong>4h</strong></td>
<td>Overview and history of ultrasound</td>
</tr>
<tr>
<td><strong>2. Ultrasound physics</strong></td>
<td><strong>31h</strong></td>
<td>Vibrations and waves. Elastic properties of solids. Acoustic waves in solids</td>
</tr>
<tr>
<td><strong>3. Ultrasonic transducers</strong></td>
<td><strong>31h</strong></td>
<td>Types (piezoelectric, capacitive, EMAT, SAW, micromachined, composite...). Modelling and simulation of electromechanical devices. Transducer characterization (electrical, acoustical, optical). Ultrasonic beam focusing and steering</td>
</tr>
<tr>
<td><strong>4. Ultrasonic systems</strong></td>
<td><strong>32h</strong></td>
<td>Main performance characteristics (dynamic range, impedance matching, bandwidth, propagation medium). Ultrasonic generators (pulsers, burst generators). Conditioning of ultrasonic signals. Measurement techniques</td>
</tr>
</tbody>
</table>
5. Applications

Learning time: 27h
Theory classes: 6h
Self study: 21h

Description:

Planning of activities

LABORATORY

Description:
Specification, design, simulation, implementation and characterization of a measurement system based on ultrasonic waves.

EXERCISES

Description:
Exercises to strengthen the theoretical knowledge.

ORAL PRESENTATION

Description:
Presentation of an individual work.

EXTENDED ANSWER TEST (FINAL EXAMINATION):

Description:
FINAL EXAMINATION

Qualification system

Final work: 40%
Exercises: 30%
Laboratory assessments: 30%
