Course guides
230674 - BID - Biomedical Instrumentation Design

Unit in charge: Barcelona School of Telecommunications Engineering
Teaching unit: 710 - EEL - Department of Electronic Engineering.

Degree: MASTER'S DEGREE IN ELECTRONIC ENGINEERING (Syllabus 2013). (Optional subject).
MASTER'S DEGREE IN ADVANCED TELECOMMUNICATION TECHNOLOGIES (Syllabus 2019). (Optional subject).

Academic year: 2019  ECTS Credits: 5.0  Languages: English

LECTURER
Coordinating lecturer: MIREYA FERNÁNDEZ
Others: JAVIER ROSELL, MIGUEL ANGEL GARCÍA

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Transversal:
1. SUSTAINABILITY AND SOCIAL COMMITMENT: Being aware of and understanding the complexity of the economic and social phenomena typical of a welfare society, and being able to relate social welfare to globalisation and sustainability and to use technique, technology, economics and sustainability in a balanced and compatible manner.
2. TEAMWORK: Being able to work in an interdisciplinary team, whether as a member or as a leader, with the aim of contributing to projects pragmatically and responsibly and making commitments in view of the resources that are available.
3. EFFECTIVE USE OF INFORMATION RESOURCES: Managing the acquisition, structuring, analysis and display of data and information in the chosen area of specialisation and critically assessing the results obtained.
4. FOREIGN LANGUAGE: Achieving a level of spoken and written proficiency in a foreign language, preferably English, that meets the needs of the profession and the labour market.

TEACHING METHODOLOGY
- Lectures- Laboratory practical work- Exercises- Short answer test (Control) - Extended answer test (Final Exam)

LEARNING OBJECTIVES OF THE SUBJECT

The aim of this course is to train students in methods of design, and evaluation of biomedical systems covering all the design phases from conception to regulations compliance. Learning results of the subject:- Ability to understand the physical functions of sensors used to build biomedical equipment. - Ability to design biomedical equipment ad-hoc to the field of utilization: low-noise systems, energy efficient systems, isolated systems, etc. - Ability to understand the technical specifications of measurement equipment and electronic components used to design biomedical instrumentation. - Ability to design biomedical devices based on mobile devices. - Ability to understand the regulations concerning biomedical systems. - Ability to understand the test required to verify EMC and safety issues concerning biomedical systems. - Ability to design biomedical instrumentation from simple circuits to complex systems for any field of use (monitoring patients at home, hospital machines, biomedical devices for non-medical applications etc.) - Ability to interpret and analyze the systems design restrictions imposed by the field of use (explosive areas, sterile atmospheres etc.) - Ability to create biomedical systems using specific sensors and mobile devices- Ability to interpret the requirements from the medical standards, in the fields of safety, electromagnetic compatibility and usability.

</tbody>
</table>

Total learning time: 125 h

CONTENTS

1. Introduction to biomedical systems

Description:
- Aims of the subject - Basic definitions - Historic review

2. Bioelectric signals

Description:
- Electrobiological phenomena - Biomedical electrodes - Biopotential measurement systems - Medical equipment for biopotential measurement - Electrical bioimpedance measurement systems

3. Safety of electrical equipment

Description:
- Safety of Electrical equipment - Regulations and Standards

4. Measurements in the cardiovascular and respiratory systems

Description:
- Blood pressure measurements - Flux, flow and cardiac output measurements - Impedance plethysmography and impedance cardiography - Respiratory flux and respiratory volume - Pulmonary ventilation monitors

ACTIVITIES

Theoretical Classes

Description:
Theoretical Classes

Full-or-part-time: 13 h
Theory classes: 13h
LABORATORY

Description:
- Bioelectrical signals amplifier.
- Safety evaluation.
- Respiration measurement.

Full-or-part-time: 26 h
Laboratory classes: 26h

EXERCISES

Description:
Exercises to strengthen the theoretical knowledge.

Full-or-part-time: 26 h
Self study: 26h

SHORT ANSWER TEST

Description:
Mid term control.

Full-or-part-time: 1 h
Theory classes: 1h

FINAL EXAMINATION:

Description:
Final examination.

Full-or-part-time: 2 h
Theory classes: 2h 30m

Self Study

Full-or-part-time: 56 h
Theory classes: 56h 30m

GRADING SYSTEM

Final examination: 30% Partial examinations and controls: 5% Exercises: 5% Laboratory assessments: 60%
