230695 - ACO - Applied Convex Optimization

Last modified: 29/04/2020

Unit in charge: Barcelona School of Telecommunications Engineering
Teaching unit: 739 - TSC - Department of Signal Theory and Communications.

Degree: MASTER'S DEGREE IN ELECTRONIC ENGINEERING (Syllabus 2013). (Optional subject).
MASTER'S DEGREE IN TELECOMMUNICATIONS ENGINEERING (Syllabus 2013). (Optional subject).
MASTER'S DEGREE IN ADVANCED TELECOMMUNICATION TECHNOLOGIES (Syllabus 2019). (Optional subject).

Academic year: 2020 **ECTS Credits:** 5.0 **Languages:** English, Spanish

LECTURER

Coordinating lecturer: Perez Neira, Ana Isabel

Others: Perez Neira, Ana Isabel

PRIOR SKILLS

Basic Algebra

TEACHING METHODOLOGY

Classroom sessions

LEARNING OBJECTIVES OF THE SUBJECT

The so-called optimization problems rise in very different fields and applications. In all of them the function to be optimize is the so-called cost or objective function and the variables that we control to carry out the optimization are many times confined, which it is called the constraints of the problem. Convex optimization arise frequently in engineering problems but often go unrecognized. This course shows that there is a substantial and useful theory for such problems. The course will give students the tools and training to recognize convex optimization problems that arise in wireless communications and networks. The basic theory of such problems is presented together with the required background to use the methods in their own research or engineering work.

STUDY LOAD

Type	Hours	Percentage
Self study	86,0	68.80
Hours large group	39,0	31.20

Total learning time: 125 h

CONTENTS

Introduction

Description:

Modern optimization vs classical one: Efficient solvable programmes

Full-or-part-time: 2h

Theory classes: 2h

Convex Sets and functions

Description:

Definitions and properties

Full-or-part-time: 4h 20m

Theory classes: 4h 20m

Convex programming and class of convex problems

Description:

Formulation of a convex optimization problem

Study of: LP, QP, SOCP, SDP, GP

Problem relaxation

Applications: norm minimization, filter design, low rank optimization problems (eg. Netflix, video security, image restoration)

Convex software tool programming

Full-or-part-time: 8h 40m

Theory classes: 4h 20m

Practical classes: 4h 20m

Duality

Description:

Lagrange Duality and KKT conditions

Primal-Dual decomposition

Applications: Radio resource management for satellite and wireless comm (power control, waterfilling, MIMO transceiver design), cloud computing

Full-or-part-time: 6h

Theory classes: 4h

Practical classes: 2h

Algorithms

Description:

Basic algorithms: interior point method

Simple methods for extremely large problems

Applications: compressed sensing, ML decoding and SDP relaxation, 5G beamforming

Full-or-part-time: 9h

Theory classes: 9h

Multi-Objective optimization

Description:

Theory

Applications: interference networks, portfolio optimization, SVM and classification

Full-or-part-time: 9h

Theory classes: 9h

GRADING SYSTEM

Individual assessment 60%

Group assessment 40%
