Course guide
230717 - AHLT - Advanced Human Language Technologies

Unit in charge: Barcelona School of Telecommunications Engineering
Teaching unit: 739 - TSC - Department of Signal Theory and Communications.

Degree: MASTER'S DEGREE IN TELECOMMUNICATIONS ENGINEERING (Syllabus 2013). (Optional subject).
MASTER'S DEGREE IN ADVANCED TELECOMMUNICATION TECHNOLOGIES (Syllabus 2019). (Optional subject).

Academic year: 2023  ECTS Credits: 5.0  Languages: English

LECTURER

Coordinating lecturer: Consultar aquí / See here:
https://telecos.upc.edu/ca/estudis/curs-actual/professorat-responsables-coordinadors/responsables-assignatura

Others: Consultar aquí / See here:
https://telecos.upc.edu/ca/estudis/curs-actual/professorat-responsables-coordinadors/professorat-assignat-idoma

PRIOR SKILLS

Introductory concepts and methods of Natural Language Processing.
Introductory concepts and methods of Machine Learning.
Programming.

REQUIREMENTS

Student will benefit from experience in programming in Python

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Transversal:
CT3. TEAMWORK: Being able to work in an interdisciplinary team, whether as a member or as a leader, with the aim of contributing to projects pragmatically and responsibly and making commitments in view of the resources that are available.

CT4. EFFECTIVE USE OF INFORMATION RESOURCES: Managing the acquisition, structuring, analysis and display of data and information in the chosen area of specialisation and critically assessing the results obtained.

CT5. FOREIGN LANGUAGE: Achieving a level of spoken and written proficiency in a foreign language, preferably English, that meets the needs of the profession and the labour market.

TEACHING METHODOLOGY

-Lectures
-Programming/Laboratory
-Problems
LEARNING OBJECTIVES OF THE SUBJECT

Can a machine learn to correct the grammaticality of text? Can a machine learn to answer questions we make in plain English? Can a machine learn to translate languages, using Wikipedia as a training set?

This course offers an in depth coverage of methods for Natural Language Processing. We will present fundamental models and tools to approach a variety of Natural Language Processing tasks, ranging from syntactic processing, to semantic processing, to final applications such as information extraction, human-machine dialogue systems, and machine translation. The flow of the course is along two main axis: (1) computational formalisms to describe natural language processes, and (2) statistical and machine learning methods to acquire linguistic models from large data collections.

1. Learn to apply statistical methods for NLP in a practical application
2. Understand statistical and machine learning techniques applied to NLP
3. Develop the ability to solve technical problems related to statistical and algorithmic problems in NLP
4. Understand fundamental methods of Natural Language Processing from a computational perspective

STUDY LOAD

**Total learning time:** 125 h
**Advanced Human Language Technology**

**Description:**
1. Course Introduction (1h Theory)
2. Syntactic Parsing (5h Theory)

Three lectures of the course will be devoted to syntactic parsing:

1.- Statistical parsing. The core are SCFG. Learning (supervised from treebanks or unsupervised using the inside/outside algorithm), parsing (Viterbi). Pros & Cons of SCFG. Other probabilistic approaches.

3. Distances and Similarities (3h Theory)

4. Semantic Role Labelling (2h Theory)
5. Semantic Parsing (6h Theory)

6. Distributional models (2h Theory)

7. Linguistic Inference (2h Theory)

Detecting inference between linguistic units. Recognizing Textual Entailment. The case of paraphrasing.

8. Deep Learning for NLP (6h Theory)

Three lectures will be devoted to Deep Learning for NLP

1.-Linear models. Feed Forward NN. Simple Perceptron. Multilayer Perceptron (MLP).

2.- Neural language modeling and Word embeddings. Use of words embeddings

9. Laboratory assignment (13h)

**Full-or-part-time:** 2h 05m
Theory classes: 0h 26m
Laboratory classes: 0h 13m
Self study : 1h 26m

**GRADING SYSTEM**

Final grade = 0.5*FE + 0.5*LP

where

FE is the grade of the final exam

LP is the grade of the lab project
