Course guides
250655 - SISTAMB - Environmental Systems

Unit in charge: Barcelona School of Civil Engineering
Teaching unit: 751 - DECA - Department of Civil and Environmental Engineering.

Degree: MASTER'S DEGREE IN ENVIRONMENTAL ENGINEERING (Syllabus 2014). (Compulsory subject).

Academic year: 2020  ECTS Credits: 5.0  Languages: Spanish, English

LECTURER

Coordinating lecturer: JAUME PUIGAGUT JUAREZ
Others: JOAN DE PABLO RIBAS, JAUME PUIGAGUT JUAREZ

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:
13340. Apply scientific concepts to environmental problems and their correlation with technological concepts.
13341. Analyze systems, environmental problems and their resolution using models and evaluate them.
13342. Acquire basic skills of laboratory work and identify the methods and instrumentation for the determination of parameters relevant to the analysis of environmental problems.

Transversal:
8562. EFFECTIVE USE OF INFORMATION RESOURCES: Managing the acquisition, structuring, analysis and display of data and information in the chosen area of specialisation and critically assessing the results obtained.

8563. FOREIGN LANGUAGE: Achieving a level of spoken and written proficiency in a foreign language, preferably English, that meets the needs of the profession and the labour market.

TEACHING METHODOLOGY

The course is organized in sessions (3 hours/session). General structure of each session is that of 2 hors theory + 1 hour numerical exercises (as long as the theory is enough to address the numerical exercises).
LEARNING OBJECTIVES OF THE SUBJECT

CE01 - Apply scientific concepts to environmental problems and their correlation with technological concepts.
CE02 - Analyze systems, environmental problems and their resolution using models and evaluate them.
CE03 - Acquire basic skills of laboratory work and identify the methods and instrumentation for the determination of parameters relevant to the analysis of environmental problems.

Very aware of the structure of land, water and artificial ecosystems and their interactions.
Meet the ecology and the cycling of elements.
Meet the major environmental problems globally.
Analyzes energy bases, stoichiometric and kinetic of different processes.
Modeling process and quantifies the performance and efficiency of systems.
Determines the basis of environmental hazards to human health and ecosystems.
Apply material balances and energy to environmental problems.
Interprets water-rock and water - air interactions using thermodynamic and kinetic methods.
Meet the pollutants and identify their impact.
Learn the basics of how the atmosphere and applies them in maintaining air quality.
Learn the basics of climate and discusses the implications of current climate change.
Conceptualized an environmental problem described by equations and poses analytical or numerical solution.
Identifies the codes you need to solve a problem as conceptualized.
Recognizes the spatial and temporal scales required to resolve the problem.
Is familiar with solutions to problems relating to dynamical systems.
Learn about simple solutions to problems advection- dispersion - reaction.
Recognizes the existence of uncertainty in the parameters of the equations and is capable of performing an uncertainty analysis and sensitivity.
Learn methods for information and action on various parameters or variables.
Understand that any measure inherently carries an associated error and is able to work with them.
It is critical to the values reported by others when the measurement method is not specified.
He has worked in the laboratory measurement of some parameters of environmental interest.

Characteristics of major ecosystems.
Biodiversity, bioaccumulation and bioaugmentation.
Biological and chemical processes in the environment.
Biogeochemical cycles (C, N, O, S, P).
Functioning of natural systems.
Toxicology and ecotoxicology.
System dynamics.

CE01 - Understand and develop ecological concepts from biological and chemical perspective. CE02 - Analyze systems, environmental problems and their resolution by models. CE03 - Develop basic skills of team work and oral presentations.
Know in depth the structure of terrestrial ecosystems, aquatic and their interactions from the point of view of ecology of populations and communities. Learn about the major environmental issues globally.

Total learning time: 125 h
CONTENTS

Biogeochemical cycles

Description:
Basic knowledge of the great cycles of terrestrial elements (carbon, nitrogen and phosphorus). It is essential to understand these cycles in order to understand the effect of man on the environment.
Calculation of carbon balances at global level

Specific objectives:
Understand the peculiarities of the great cycles of terrestrial elements (carbon, nitrogen and phosphorus)
Understanding numerically the effect of man on the carbon cycle (climate change)

Full-or-part-time: 7h 11m
Theory classes: 2h
Practical classes: 1h
Self study: 4h 11m

Population ecology

Description:
Will the basic concepts to understand the ecological relationships between people and their environment.
Activities will be complementary to the number of theoretical population ecology.

Specific objectives:
The student acquires the knowledge to understand the use of the people as a tool to determine the quality of environmental systems.
Having the numeric base to understand and quantify the effects of man on environmental systems.

Full-or-part-time: 28h 47m
Theory classes: 9h
Practical classes: 3h
Self study: 16h 47m

Ecosystems

Description:
Ecosystems
Problem

Full-or-part-time: 21h 36m
Theory classes: 6h
Practical classes: 3h
Self study: 12h 36m
Presentations

Description:
The students, from the material provided by the teacher, will describe a means of presenting work and what are the strategies that need to take the man to not exceed the biocapacity of its environment.

Specific objectives:
Take the conscience of man's effect on environmental systems and sustainability strategies which are desired.

Full-or-part-time: 21h 36m
- Theory classes: 3h
- Laboratory classes: 6h
- Self study: 12h 36m

Review

Full-or-part-time: 4h 48m
- Laboratory classes: 2h
- Self study: 2h 48m

GRADING SYSTEM

The rating will be obtained from the continuous assessment marks and corresponding laboratory and / or computer room.

Continuous assessment will be based on the oral presentation and delivery of three jobs. This represents 60% of the total course.

The evaluation of the knowledge imparted will be carried out by means of a multiple-choice test + problems. This represents 40% of the total course.

EXAMINATION RULES.

The evaluated activities are compulsory. Not presenting any of the three activities will result in failing the course.
