Coordinating unit: 250 - ETSECCPB - Barcelona School of Civil Engineering  
Teaching unit: 713 - EQ - Department of Chemical Engineering  
Academic year: 2015  
Degree: MASTER'S DEGREE IN ENVIRONMENTAL ENGINEERING (Syllabus 2014). (Teaching unit Optional)  
ECTS credits: 5  
Teaching languages: Catalan, Spanish  

Learning objectives of the subject

CE01 - Apply scientific concepts to environmental problems and their correlation with technological concepts. 
CE08-Dimension unconventional systems and advanced treatment and raise their mass balance and energy.

Explore scientific concepts and technical principles of quality management of the receiving means, atmosphere, water and soil, and applied to problem solving.  
Explore scientific concepts and technical principles of management and treatment of gaseous emissions, water supply, sewage and waste and remediation techniques for groundwater and contaminated soils.  
Sized systems for the treatment of major pollutants vectors in specific sectors of activity.  
Interprets rules, identifies goals, assesses technical alternatives proposed unconventional solutions and priority actions.

Infrastructure management. Types, characteristics, advantages and disadvantages. Development programs in the territory as land management and technological development. Alternative systems implemented. Sustainability criteria.  
### Study load

| **Total learning time:** 125h | Theory classes: 15h 12.00% | Practical classes: 10h 8.00% | Laboratory classes: 10h 8.00% | Guided activities: 10h 8.00% | Self study: 80h 64.00% |
# 250675 - Management of Infrastructures of Waste Treatment

## Content

| **MUNICIPAL WASTE MANAGEMENT. THEORY**                                 | Models of municipal waste management. Collection and transport systems. Plans for management of municipal waste. Applicable regulations. Characterization of municipal waste. Fractions | - Identify the different models of municipal waste management.  
- Know and apply current legislation on municipal waste.  
- Know and apply the characterization systems and its mission.  
- Application of the concepts of the subject. | 16h 48m  
Theory classes: 7h  
Self study : 9h 48m |
| **MUNICIPAL WASTE MANAGEMENT. PROBLEMS**                               | Problems related to the topic 1                                           | - Application of the concepts of the subject. | 2h 24m  
Practical classes: 1h  
Self study : 1h 24m |
| **INFRASTRUCTURE MANAGEMENT. THEORY**                                  | Type, characteristics, advantages and disadvantages. Development in the territory by land management programs and technological development. Alternatives to the systems implemented. Sustainability criteria | - Identify and understand the different infrastructures municipal waste treatment.  
- Discern and calculate the most suitable for different compositions of municipal waste infrastructure.  
- Practical exercises management of these infrastructures. | 9h 36m  
Theory classes: 4h  
Self study : 5h 36m |
INFRAESTRUCTURE MANAGEMENT. PROBLEMS

**Description:**
Resolution 2 theme problems

**Specific objectives:**
- Apply the concepts of issue 2

INDUSTRIAL WASTE. GENERATION, COMPOSITION AND TIPOLOGIES. TEORIA

**Description:**

**Specific objectives:**
- Recognize the physical and chemical parameters applicable to the classification of a waste.
- Take the right way a representative sample of material.
- Know how the waste leaching test is performed.
- Successfully manage the different waste that can be generated as a result of the production activity of a company, applying current legislation.
- Sort the waste properly.
- Determine the different ways of treatment / recovery and possible to discern between the various possible options one that best fits your priorities.
- Recognize, use and correctly fill all intercentres standardized documents by an industrial waste management.
- Recognize the stabilization process of a residue.
- Identify bag products as a possible route for the waste management.
- Recognize the major differences in construction and operation of controlled types I, II and III deposits.
- Know the applicable regulations regarding industrial waste incineration.
- Know the applicable regulations regarding industrial waste incineration.
- Recognize the main physical-chemical treatments applied to waste containing cyanide and metals, nitrites, ammonia and ammonium salts, and / or chromate.
- Correctly apply the rules on cross-border transport of waste.
- Recognize, use and correctly fill all standardized generated documents for the management of the waste out of the country where it has been produced.
### Qualification system

The mark of the course is obtained from the ratings of continuous assessment.

Continuous assessment consist in several activities, both individually and in group, of additive and training characteristics, carried out during the year (both in and out of the classroom).

The evaluation tests consist of a part with questions about concepts associated with the learning objectives of the course with regard to knowledge or understanding, and a part with a set of application exercises.

### Regulations for carrying out activities

Failure to perform a continuous assessment activity in the scheduled period will result in a mark of zero in that activity.

### Bibliography

**Basic:**

- Professors asignatura. Legislación europea, estatal, autonómica y local. Planes y programas de infraestructuras Trabajos de investigación de los profesores.
