270712 - HCI - Human-Computer Interaction

Coordinating unit: 270 - FIB - Barcelona School of Informatics
Teaching unit: 710 - EEL - Department of Electronic Engineering
707 - ESAII - Department of Automatic Control

Academic year: 2019
Degree: MASTER'S DEGREE IN ARTIFICIAL INTELLIGENCE (Syllabus 2012). (Teaching unit Optional)
MASTER'S DEGREE IN ARTIFICIAL INTELLIGENCE (Syllabus 2017). (Teaching unit Optional)

ECTS credits: 4.5 Teaching languages: English

Prior skills
None

Degree competences to which the subject contributes

Specific:
CEA10. Capability to understand advanced techniques of Human-Computer Interaction, and to know how to design, implement and apply these techniques in the development of intelligent applications, services or systems.
CEP3. Capacity for applying Artificial Intelligence techniques in technological and industrial environments to improve quality and productivity.
CEP4. Capability to design, write and report about computer science projects in the specific area of Artificial Intelligence.
CEP6. Capability to assimilate and integrate the changing economic, social and technological environment to the objectives and procedures of informatic work in intelligent systems.
CEP7. Capability to respect the legal rules and deontology in professional practice.

General:
CG1. Capability to plan, design and implement products, processes, services and facilities in all areas of Artificial Intelligence.
CG3. Capacity for modeling, calculation, simulation, development and implementation in technology and company engineering centers, particularly in research, development and innovation in all areas related to Artificial Intelligence.

Transversal:
CT3. TEAMWORK: Being able to work in an interdisciplinary team, whether as a member or as a leader, with the aim of contributing to projects pragmatically and responsibly and making commitments in view of the resources that are available.
CT5. APPROPRIATE ATTITUDE TOWARDS WORK: Capability to be motivated for professional development, to meet new challenges and for continuous improvement. Capability to work in situations with lack of information.
CT7. ANALISIS Y SINTESIS: Capability to analyze and solve complex technical problems.
270712 - HCI - Human-Computer Interaction

Teaching methodology

Methodology will be based on two kind of activities: theory and practice. Theory will be developed around specific topics with the following scheme:

- Plenary conferences given by the teacher
- Self-study sessions done by the students on a related topic
- Students presentations about the conclusions on the topic (presentations will be part of the evaluation activities)

Practice aspect will follow a Project Based Learning approach:
1. The student should do a literature review of the field, detecting the most important research groups, patents and projects in his area of interest
2. Design of a real project based on a use case
3. Detailed analysis of the most convenient architecture and algorithmia.
4. Technologies and innovative aspects of the proposed solution
A presentation of the final project will be part of the evaluation process

Learning objectives of the subject

1. Acquiring Human-Computer Interaction general methodology
2. Development of Ambient Intelligence related projects

Study load

<table>
<thead>
<tr>
<th>Total learning time: 112h 30m</th>
<th>Hours large group: 8h</th>
<th>7.11%</th>
</tr>

### Content

#### Introduction

**Degree competences to which the content contributes:**

**Description:**
- Principles of human-computer interaction.
- User centered design, user needs elicitation and ergonomics principles.
- Contexts of use, and functional requirements.
- User-system communication design.
- Project management principles.

#### Interaction

**Degree competences to which the content contributes:**

**Description:**
- Principles of human information processing, performance, learning and cognition.
- Sensation and perception.
- Multimodal interaction.

#### Pervasive Computing

**Degree competences to which the content contributes:**

**Description:**
- Principles and technology overview.
- Architectures.
- Operating Systems.
- Location and context awareness.
- Ubiquitous interfaces.

#### Person centered Ambient Intelligence

**Degree competences to which the content contributes:**

**Description:**
- Smart environments. Principles and technologies of Ambient Intelligent design.
- Ambient Assisted Living (AAL): requirements and solutions.
- Ethics in AAL: privacy, autonomy, integrity, reliability, e-inclusion, technology in the society, ...

Qualification system

Evaluation will be according the implemented methodology for the course. The student will get a FINAL MARK mainly based on a continuous evaluation scheme. A personal Final Exam based on theory aspects will be done, with a specific weight in the Final Mark.

Final Mark = 0.4 PROJECT evolution mark + 0.3 PROJECT final assessment + 0.15 Presentation and reporting of theory sessions + 0.15 Final Exam mark.

- The evolution of the project will be based on a number of scheduled sessions that will be evaluated by the professors and the students (some of them)

- The final assessment of the Project will be done in a public presentation session at the end of the semester. This session will be evaluated by the professors and the students. Students will be asked to submit a complete report of the Project that will be evaluated by the professors, but will be available to all the students for their information.

- After some specific theory sessions, the students will be asked to prepare a related subject that they will present to the audience. The professors and the students will evaluate this session (with different weights in the marks) and a report will be submitted after this presentation. Professors will consider these reports in the professors’ evaluation.

- In the final exam, the student will be asked to answer some specific questions related to the theory aspects developed along the course.
