Course guide
270739 - AIHC - Artificial Intelligence in Health Care

Unit in charge: Barcelona School of Informatics
Teaching unit: 1042 - URV - Universitat Rovira i Virgili.

Degree: MASTER'S DEGREE IN ARTIFICIAL INTELLIGENCE (Syllabus 2017). (Optional subject).

Academic year: 2022  ECTS Credits: 3.0  Languages: English

LECTURER

Coordinating lecturer: DAVID RIAÑO RAMOS

Others: Primer quadrimestre:
DAVID RIAÑO RAMOS - 10

PRIOR SKILLS

Basic concepts of AI.

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:
CEA8. Capability to research in new techniques, methodologies, architectures, services or systems in the area of Artificial Intelligence.
CEP3. Capacity for applying Artificial Intelligence techniques in technological and industrial environments to improve quality and productivity.
CEP6. Capability to assimilate and integrate the changing economic, social and technological environment to the objectives and procedures of informatic work in intelligent systems.

General:
CG1. Capability to plan, design and implement products, processes, services and facilities in all areas of Artificial Intelligence.

Transversal:
CT3. TEAMWORK: Being able to work in an interdisciplinary team, whether as a member or as a leader, with the aim of contributing to projects pragmatically and responsibly and making commitments in view of the resources that are available.

CT6. REASONING: Capability to evaluate and analyze on a reasoned and critical way about situations, projects, proposals, reports and scientific-technical surveys. Capability to argue the reasons that explain or justify such situations, proposals, etc.

Basic:
CB7. Ability to integrate knowledges and handle the complexity of making judgments based on information which, being incomplete or limited, includes considerations on social and ethical responsibilities linked to the application of their knowledge and judgments.
CB8. Capability to communicate their conclusions, and the knowledge and rationale underpinning these, to both skilled and unskilled public in a clear and unambiguous way.
CB9. Possession of the learning skills that enable the students to continue studying in a way that will be mainly self-directed or autonomous.

TEACHING METHODOLOGY

The entire course will be worked in groups. A topic of AI applied to health care will be presented to all the groups, an article and a list of questions related to the topic presented will be released. Each group will have two weeks to prepare an oral presentation of 15 minutes which will outline the important issues of the article and his response to the questions. After the presentation of all groups, there will be an open discussion among all groups about topic. This methodology will be repeated five times throughout the course, each with a different topic of IA applied to medicine.
LEARNING OBJECTIVES OF THE SUBJECT

1. Capacity to read, understand, and relate the information contained in scientific & technological documents
2. Train the synthesis, preparation, exposition, and defense of scientific topics in public
3. Ability to connect and complement own ideas with other's and also with AI technologies explained in other courses

STUDY LOAD

<table>

Total learning time: 75 h

CONTENTS

**Artificial intelligence in health care**

Description:
A review of the state of AI in health care will be analyzed

**Grand challenges in clinical decision support**

Description:
A review of the pending research and development CDS open problems will be analyzed

**Data mining in health care**

Description:
A review of important AI data mining technologies and their application to medicine will be analyzed

**Big data analytics in health care**

Description:
A description of BDA and its application to health care will be analyzed

**IBM Watson**

Description:
The use of IBM Watson and technology underneath when applied to health care will be analyzed

**Ethical challenges and recommendations in AIHC**

Description:
Ethical framework of AI when applied to medicine
# ACTIVITIES

**Introduction of the course**

**Description:**
The professor will expose the relevant issues related to the subject: Content; Material; Calendar; Evaluation; Bibliography

**Full-or-part-time:** 2h
Theory classes: 2h

**Preparation of 5 topics by the students**

**Description:**
The five topics of the subject are prepared by the students in groups, every other week.

**Specific objectives:**
1

**Related competencies:**
CG1. Capability to plan, design and implement products, processes, services and facilities in all areas of Artificial Intelligence.
CEA8. Capability to research in new techniques, methodologies, architectures, services or systems in the area of ??Artificial Intelligence.
CT3. TEAMWORK: Being able to work in an interdisciplinary team, whether as a member or as a leader, with the aim of contributing to projects pragmatically and responsibly and making commitments in view of the resources that are available.

CT6. REASONING: Capability to evaluate and analyze on a reasoned and critical way about situations, projects, proposals, reports and scientific-technical surveys. Capability to argue the reasons that explain or justify such situations, proposals, etc..
CB9. Possession of the learning skills that enable the students to continue studying in a way that will be mainly self-directed or autonomous.
CB7. Ability to integrate knowledges and handle the complexity of making judgments based on information which, being incomplete or limited, includes considerations on social and ethical responsibilities linked to the application of their knowledge and judgments.
CB8. Capability to communicate their conclusions, and the knowledge and rationale underpinning these, to both skilled and unskilled public in a clear and unambiguous way.

**Full-or-part-time:** 40h
Self study: 40h
**Exposition & questions 1**

**Description:**
Students expose and answer questions about topic 1 (in group).

**Specific objectives:**
2

**Related competencies:**
CG1. Capability to plan, design and implement products, processes, services and facilities in all areas of Artificial Intelligence.
CEA8. Capability to research in new techniques, methodologies, architectures, services or systems in the area of Artificial Intelligence.
CT3. TEAMWORK: Being able to work in an interdisciplinary team, whether as a member or as a leader, with the aim of contributing to projects pragmatically and responsibly and making commitments in view of the resources that are available.
CT6. REASONING: Capability to evaluate and analyze on a reasoned and critical way about situations, projects, proposals, reports and scientific-technical surveys. Capability to argue the reasons that explain or justify such situations, proposals, etc..
CB9. Possession of the learning skills that enable the students to continue studying in a way that will be mainly self-directed or autonomous.
CB7. Ability to integrate knowledges and handle the complexity of making judgments based on information which, being incomplete or limited, includes considerations on social and ethical responsibilities linked to the application of their knowledge and judgments.
CB8. Capability to communicate their conclusions, and the knowledge and rationale underpinning these, to both skilled and unskilled public in a clear and unambiguous way.

**Full-or-part-time:** 5h
Guided activities: 3h
Self study: 2h

---

**Exposition & questions 2**

**Description:**
Students expose and answer questions about topic 2 (in group).

**Specific objectives:**
2

**Related competencies:**
CG1. Capability to plan, design and implement products, processes, services and facilities in all areas of Artificial Intelligence.
CEA8. Capability to research in new techniques, methodologies, architectures, services or systems in the area of Artificial Intelligence.
CT3. TEAMWORK: Being able to work in an interdisciplinary team, whether as a member or as a leader, with the aim of contributing to projects pragmatically and responsibly and making commitments in view of the resources that are available.
CT6. REASONING: Capability to evaluate and analyze on a reasoned and critical way about situations, projects, proposals, reports and scientific-technical surveys. Capability to argue the reasons that explain or justify such situations, proposals, etc..
CB9. Possession of the learning skills that enable the students to continue studying in a way that will be mainly self-directed or autonomous.
CB7. Ability to integrate knowledges and handle the complexity of making judgments based on information which, being incomplete or limited, includes considerations on social and ethical responsibilities linked to the application of their knowledge and judgments.
CB8. Capability to communicate their conclusions, and the knowledge and rationale underpinning these, to both skilled and unskilled public in a clear and unambiguous way.

**Full-or-part-time:** 5h
Guided activities: 3h
Self study: 2h
### Exposition & questions 3

**Description:**
Students expose and answer questions about topic 3 (in group).

**Specific objectives:**
2

**Related competencies:**
- CG1. Capability to plan, design and implement products, processes, services and facilities in all areas of Artificial Intelligence.
- CEA8. Capability to research in new techniques, methodologies, architectures, services or systems in the area of ??Artificial Intelligence.
- CT3. TEAMWORK: Being able to work in an interdisciplinary team, whether as a member or as a leader, with the aim of contributing to projects pragmatically and responsibly and making commitments in view of the resources that are available.
- CT6. REASONING: Capability to evaluate and analyze on a reasoned and critical way about situations, projects, proposals, reports and scientific-technical surveys. Capability to argue the reasons that explain or justify such situations, proposals, etc..
- CB9. Possession of the learning skills that enable the students to continue studying in a way that will be mainly self-directed or autonomous.
- CB7. Ability to integrate knowledges and handle the complexity of making judgments based on information which, being incomplete or limited, includes considerations on social and ethical responsibilities linked to the application of their knowledge and judgments.
- CB8. Capability to communicate their conclusions, and the knowledge and rationale underpinning these, to both skilled and unskilled public in a clear and unambiguous way.

**Full-or-part-time:** 5h
Guided activities: 3h
Self study: 2h

### Exposition & questions 4

**Description:**
Students expose and answer questions about topic 4 (in group).

**Full-or-part-time:** 5h
Guided activities: 3h
Self study: 2h

### Exposition & questions 5

**Description:**
Students expose and answer questions about topic 5 (in group).

**Full-or-part-time:** 5h
Guided activities: 3h
Self study: 2h
Conclusions I by the professor

Description:
The conclusions of the course are exposed.

Specific objectives:
3

Related competencies:
CEP3. Capacity for applying Artificial Intelligence techniques in technological and industrial environments to improve quality and productivity.
CEP6. Capability to assimilate and integrate the changing economic, social and technological environment to the objectives and procedures of informatic work in intelligent systems.
CT3. TEAMWORK: Being able to work in an interdisciplinary team, whether as a member or as a leader, with the aim of contributing to projects pragmatically and responsibly and making commitments in view of the resources that are available.
CT6. REASONING: Capability to evaluate and analyze on a reasoned and critical way about situations, projects, proposals, reports and scientific-technical surveys. Capability to argue the reasons that explain or justify such situations, proposals, etc..

Full-or-part-time: 3h
Theory classes: 3h
