280722 - Propulsion Systems and Electrical Plant

Coordinating unit: 280 - FNB - Barcelona School of Nautical Studies
Teaching unit: 709 - EE - Department of Electrical Engineering
Academic year: 2017
Degree: MASTER'S DEGREE IN THE MANAGEMENT AND OPERATION OF MARINE ENERGY FACILITIES (Syllabus 2016). (Teaching unit Compulsory)
ECTS credits: 5
Teaching languages: Catalan, Spanish

Coordinators:
Pau Casals Torrens

Others:
Pau Casals Torrens
Ricard Bosch Tous

Prior skills
Knowing circuit theory and have the ability to do calculations in DC and AC circuits (single and three phase).
Ability to compute and solve problems of electrical machines.

Degree competences to which the subject contributes

Specific:
CE12MEM. Manage the operation of electrical control equipment and electronic
CE13MEM. Manage the location and correction of equipment failures, electrical and electronic control.
CE6MEM. Analyze alternative solutions for the definition and optimization power plants and ship propulsion.
CE2MEM. Apply the principles of renewable energy in marine installations.
CE4MEM. Identify and apply the principles of generation, transmission and distribution of energy.

Generical:
CG1MEM. Identify marine facilities. Influencing design activities, redesign, planning, management and operation thereof.
CG2MEM. Design and redesign facilities and marine equipment. Apply the guidelines defined by rules, regulations and procedures.
CG3MEM. Apply the acquired knowledge and problem solving environments new or unfamiliar environments within broader contexts and multidisciplinary being able to integrate this knowledge

Teaching methodology
Analysis of real applications.
Development of attitudes and skills sistemas electrical operation of the vessel.
Case studies and articles on the subject.
Perform work individually.

Learning objectives of the subject

Analysis of real applications.
Development of attitudes and skills sistemas electrical operation of the vessel.
Case studies and articles on the subject.
Perform work individually.
Understanding the drawing and connections of different types of machines and electrical applications.
Know the regulatory systems of V, f, P, Q in synchronous generators.
Know the regulatory systems and control of start and variation of speed of electric motors.
Having the ability to perform calculations and solve problems of machines and electrical systems, using the corresponding equivalent circuits.
On the other hand, one of the objectives of this course is to provide knowledge, understanding and skills of the STCW of electrical systems at the management level:
- Management and operation of electrical control equipment, including systems of more than 1,000 V (STCW A-III / 2).
- Knowledge to test electrical equipment to detect faults and keep them in working order or repair. (STCW A-III / 2).
- Knowledge of the use and safe operation of electrical equipment. (STCW A-III / 5).

"This course will evaluate the following STCW competences:"
Manage operation of electrical and electronic control equipment
Manage trouble-shooting, restoration of electrical and electronic control equipment to operating condition

### Study load

<p>| Total learning time: 45h | Hours large group: | 45h | 100.00% |</p>

During the course there will be continuous evaluations, according to the following percentages:

Continuous assessment 40% (Exams, Practices, Works, Expositions)
Partial Tests 30%
Final Exam 30%

Qualification system

Attendance and completion of the hands-on labs, is a compulsory requirement.
280722 - Propulsion Systems and Electrical Plant
