Course guide
280815 - 280815 - Maintenance, Management and Life Cycle Optimization

Unit in charge: Barcelona School of Nautical Studies
Teaching unit: 742 - CEN - Department of Nautical Sciences and Engineering.
Degree: MASTER'S DEGREE IN NAVAL AND OCEAN ENGINEERING (Syllabus 2017). (Compulsory subject).
Academic year: 2023
ECTS Credits: 5.0
Languages: Catalan, Spanish

LECTURER
Coordinating lecturer: RAMON GRAU MUR
Others: Primer quadrimestre: RAMON GRAU MUR - Grup: MUENO

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:
MUENO_CE13. Knowledge of systems engineering applied to the definition of a ship, artifact or maritime platform through the analysis and optimization of its life cycle
MUENO_CE15. Knowledge of economics and business management in the maritime field

General:
MUENO.CG2. Ability to conceive and develop solutions that are technically, economically and environmentally appropriate to the needs of maritime or integral transportation of people and goods, of the use of oceanic resources and of the marine subsoil (fishing, energy, minerals, etc.), adequate use of the marine habitat and means of defense and maritime security
MUENO.CG5. Ability to design and control the construction, repair, transformation, maintenance and inspection processes of previous mills
MUENO.CG7. Ability to integrate complex maritime systems and translation into viable solutions
MUENO.CG12. Ability to manage the operation of ships and maritime devices, and the engineering necessary for their safety, operation, logistical support and maintenance
MUENO.CG14. Ability to analyze, assess and correct the social and environmental impact of technical solutions
MUENO.CG15. Ability to organize and direct multidisciplinary work groups in a multilingual environment, and to generate reports for the transmission of knowledge and results

Transversal:
CT2. SUSTAINABILITY AND SOCIAL COMMITMENT: Know and understand the complexity of economic and social phenomena typical of the welfare society, being able to relate welfare to globalization and sustainability; acquire skills to use in a balanced manner compatible technology, technology, economics and sustainability.
CT3. TEAMWORK: Ability to work as a member of an interdisciplinary team, either as a member or performing management tasks, with the aim of contributing to projects pragmatically and sense of responsibility, assuming commitments considering the resources available.
CT4. EFFECTIVE USE OF INFORMATION RESOURCES: Manage the acquisition, structuring, analysis and visualization of data and information in the field of specialty, and critically evaluate the results of this management.
CT5. THIRD LANGUAGE Learning a third language, preferably English, with adequate oral and written and in line with the future needs of the graduates.
Basic:
CB6. Possess knowledge and understanding that provide a basis or opportunity be original in the development and / or application of ideas, often in a research context.
CB7. That the students can apply their knowledge and ability to solve problems in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their study area.
CB8. Students should be able to integrate knowledge and handle the complexity of making judgments based on information that, being incomplete or limited, includes reflections on the responsibilities social and ethical linked to the application of their knowledge and judgments.
CB9. That students can communicate their conclusions and the knowledge and Latest rationale underpinning to specialists and non Specialty clearly and unambiguously.
CB10. Students must possess the learning skills that enable them continue studying in a way that will be largely self-directed or autonomous.

TEACHING METHODOLOGY
Receive, understand and synthesize knowledge.
Develop reasoning and critical spirit.

LEARNING OBJECTIVES OF THE SUBJECT
Develop and manage the engineering of logistical support and the maintenance and repair of ships and artefacts

STUDY LOAD

<table>
<thead>
<tr>
<th>Type</th>
<th>Hours</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hours large group</td>
<td>45,0</td>
<td>100.00</td>
</tr>
</tbody>
</table>

Total learning time: 45 h

CONTENTS

1. Management and exploitation of maritime industries

Description:
Management and exploitation of maritime industries.
Maintenance management

Full-or-part-time: 14h
Theory classes: 3h
Guided activities: 3h
Self study: 8h
2. Systems engineering

Description:
Operational and logistic requirements, sustainability, process of obtaining a system, management plans, production and strategies.
Application of engineering to a vessel and/or device.
Analysis techniques
Organization of works

Full-or-part-time: 45h
Theory classes: 18h
Guided activities: 18h
Self study: 9h

3. Systems logistics

Description:
Life cycle, configuration, life time analysis, reliability, maintenance, logistic support analysis.
Maintenance contracts.
Application of logistics to a vessel and/or device

Full-or-part-time: 41h
Theory classes: 16h
Guided activities: 16h
Self study: 9h

4. Costs

Description:
Concepts of price, investment, expense and cost.
Application to the project and construction of ship and artifact.
Costs of a ship throughout its life.
Profitability and business profit

Full-or-part-time: 25h
Theory classes: 8h
Guided activities: 8h
Self study: 9h

GRADING SYSTEM

The final grade is the sum of the following partial grades:

\[ N_{\text{final}} = 0,2 \times N_{1c} + 0,2 \times N_{2c} + 0,6 \times N_{af} \]

- \( N_{\text{final}} \): final grade of the subject
- \( N_{1c} \): qualification of the first evaluation
- \( N_{2c} \): qualification of the second evaluation
- \( N_{af} \): qualification of the final evaluation

EXAMINATION RULES.

If one of the assessment activities is not carried out, it will be considered not rated.
It will be considered Not Presented when a minimum of 80% of the assessment activities is not carried out.
BIBLIOGRAPHY
