# 300267 - ARASM - Augmented Reality & Smart Objects

## Degree competences to which the subject contributes

### Basic:
- CB6. (ENG) CB6 - Poseer y comprender conocimientos que aporten una base u oportunidad de ser originales en el desarrollo y/o aplicación de ideas, a menudo en un contexto de investigación.
- CB9. (ENG) CB9 - Que los estudiantes sepan comunicar sus conclusiones y los conocimientos y razones últimas que las sustentan a públicos especializados y no especializados de un modo claro y sin ambigüedades.

### Generical:
- 03 DIS. (ENG) Diseñar aplicaciones de alto valor añadido basadas en las Tecnologías de la Información y las Comunicaciones (TIC), aplicadas a cualquier ámbito de la sociedad.
- 06 RES. (ENG) Resolver problemas y mejorar procesos en cualquier ámbito social a partir de la aplicación de las TIC, integrando conocimientos de diversos ámbitos y aplicando ingeniería de alto nivel tecnológico.

### Transversal:
- 03 TLG. THIRD LANGUAGE. Learning a third language, preferably English, to a degree of oral and written fluency that fits in with the future needs of the graduates of each course.

## Prior skills

Solid computer programming skills

## Teaching methodology

The subject combines a small number of lectures, several guided lab sessions and an small project that combines Augmented reality and Smart Objects technologies

## Learning objectives of the subject

In this course, students will learn to:
1. What is and what does Augmented Reality consist of, as well as its applications.
2. To create intelligent objects with Arduino.
3. To program Augmented Reality applications for mobile platforms that use image processing and GPS location techniques.

### Coordinating unit:
300 - EETAC - Castelldefels School of Telecommunications and Aerospace Engineering

### Teaching unit:
701 - AC - Department of Computer Architecture

### Academic year:
2018

### Degree:
MASTER'S DEGREE IN APPLIED TELECOMMUNICATIONS AND ENGINEERING MANAGEMENT (MASTEAM) (Syllabus 2015). (Teaching unit Optional)

### ECTS credits:
3

### Teaching languages:
English

### Teaching staff

- **Coordinator:** Royo Vallés, M. Dolores
- **Others:** Royo Vallés, M. Dolores

### Opening hours

**Timetable:**
You can arrange an appointment by sending an email to dolors.royo@upc.edu
Office: 014 office, EETAC Building

### Prior skills

Solid computer programming skills

Smart Objects

Description:
This part of the course, through small guided projects, will teach how to design and build a smart object based on Arduino and CoAp protocol (server side), also the basics of developing mobile applications to access this smart object (client side).

Related activities:
Activities:
1. Introduction to Smart Objects
3. Client side. How to access to the smart object through an Android app

Specific objectives:
Objectives:
1. Students will learn how to build simple smart objects based on Arduino and CoAp communication protocol.
2. Students will learn to build prototype applications to get smart object’s sensor values

Qualification system
Qualification System.
45% Augmented Reality and Smart Object evaluation concepts. Oral and written evaluation of the knowledge acquired regarding basic concepts of these technologies and what added value they can offer with respect to other technologies (web applications for example)
45% Project evaluation. Quality of the apps presented in terms of functionality, usability and complexity.
10% Subjective evaluation

Bibliography
