32060 - FOPT - Fourier Optics

Coordinating unit: 230 - ETSETB - Barcelona School of Telecommunications Engineering
Teaching unit: 731 - OO - Department of Optics and Optometry
Academic year: 2015
Degree: MASTER'S DEGREE IN PHOTONICS (Syllabus 2009). (Teaching unit Optional)
ERASMUS MUNDUS MASTER'S DEGREE IN PHOTONICS ENGINEERING, NANO-PHOTONICS AND BIOPHOTONICS (Syllabus 2010). (Teaching unit Optional)
DOCTORAL DEGREE IN PHOTONICS (Syllabus 2007). (Teaching unit Optional)
DOCTORAL DEGREE IN OPTICAL ENGINEERING (Syllabus 2007). (Teaching unit Optional)
ECTS credits: 5  Teaching languages: English

Teaching staff

Coordinator: JUAN CAMPOS
Others: SALVADOR BOSCH
M. SAGRARIO MILLAN GARCIA-VARELA

Teaching methodology

Presencial teaching + activities

Learning objectives of the subject

This course intends to convey the importance of Fourier techniques for the rigorous analysis of optical systems, its general scope encompassing both fundamental as well as practical topics. These tools are derived from diffraction theory and provide an account of optical phenomena in a language close to that used in the communication and information sciences.
The students will be evaluated through both a final written examination and continuous evaluation based on a set of regular activities in the classroom, such as individual problem solving or computer lab exercises.
