340609 - XACO-R2O44 - Communication Networks

Coordinating unit: 340 - EPSEVG - Vilanova i la Geltrú School of Engineering
Teaching unit: 744 - ENTEL - Department of Network Engineering
Academic year: 2018
Degree: MASTER’S DEGREE IN AUTOMATIC SYSTEMS AND INDUSTRIAL ELECTRONICS (Syllabus 2012).
ECTS credits: 5
Teaching languages: Spanish

Teaching staff
Coordinator: Jordi Mataix Oltra
Others: Jordi Mataix Oltra

Opening hours
Timetable: Monday: from 18 to 19h.  
Friday: from 18 to 19h.  Room: D-171
And linking to the CAMPUS ATENEA and by e-mail: jordi.mataix@upc.edu

Degree competences to which the subject contributes

Specific:
1. CEV03 - Analyze and evaluate the different protocols and wireless networks in the field of robotics and automated systems
5. CB10 - Skills that enable to continue studying in a way that should be self-directed and autonomous

6. CB7 - Students can apply their knowledge and their ability to solve problems in new or unfamiliar contexts within broader (or multidisciplinary) contexts related to their field of study
7. CB8 - Students will be able to integrate knowledge and handle complexity and formulate judgments from an incomplete or limited information, including reflecting on social and ethical responsibilities linked to the application of their knowledge and judgments
8. CB9 - Students can communicate their conclusions, knowledge and rationale underpinning these, to skilled and unskilled public in a clear and unambiguous way
9. CC08 - Acquire concepts and techniques related to quantitative and experimental methods for analysis and decision making

Transversal:
2. EFFECTIVE USE OF INFORMATION RESOURCES. Managing the acquisition, structure, analysis and display of information from the own field of specialization. Taking a critical stance with regard to the results obtained.
3. TEAMWORK. Being able to work as a team player, either as a member or as a leader. Contributing to projects pragmatically and responsibly, by reaching commitments in accordance to the resources that are available.
4. THIRD LANGUAGE. Learning a third language, preferably English, to a degree of oral and written fluency that fits in with the future needs of the graduates of each course.
This course is introductory to the topics related with data networking by focusing on the TCP-IP protocols suite. Internet allows the interconnection of computers, devices, sensors and in general electronic devices to run distributed applications; and to control, configure, in other words, to allow remotely the automatization of any industrial process. Furthermore, the new paradigm well known as the "Internet of Things aims to literally have everything imaginable connected to a network so that information from all these connected "things" can be stored, transferred, analyzed and acted upon in new and, usually automated, ways via network connections with everything else. Knowledge of industrial networks and fieldbuses will also be given; control facilities and study protocols in real time.

Topics addressed in this course provide insight into the networks operation, by applying a top-down approach; from the application till the network layer. And, finally some effort should be devoted to analyze networks, either fix or mobile, which interconnect communication equipments and end user devices.

## Content

<table>
<thead>
<tr>
<th>Topic</th>
<th>Learning time: 8h</th>
<th>Description:</th>
<th>Related activities:</th>
</tr>
</thead>
</table>
### Topic 4: Level data link. LANs.

**Learning time:** 9h  
Theory classes: 4h 30m  
Guided activities: 3h  
Self study: 1h 30m

**Description:**  
Level data link. Lattice. Data link protocols. Control of bit errors. LAN. LANs elements and standards. Media Access Protocols MAC. Logical Link Control LLC. IP over a LAN packets. ARP.

**Related activities:**  
Problem solving

### Topic 5: Ethernet and interconnection networks.

**Learning time:** 9h  
Theory classes: 3h  
Practical classes: 1h 30m  
Self study: 4h 30m

**Description:**  

**Related activities:**  
Problem solving

### Topic 6: Industrial networks

**Learning time:** 14h  
Theory classes: 3h  
Guided activities: 4h  
Self study: 7h

**Description:**  

**Related activities:**  
Workgroups. 12h  
Draft. Design and specification of an implementation of an industrial network to a manufacturing, industrial process or control of a facility
The final mark will be the result of the average of the activities undertaken by the student throughout the course:

- **Theory**: The theoretical concepts related with the subject acquired by the student by individual study and by any other learning activity performed mainly in the classroom. They will be assessed by appropriate written exams or tests. Precisely there will be two main written exams as detailed below:
  * A partial exam, named CONTROL, at the middle of the course
  * and the final exam at the end of the semester, named Aval Final.

- **Work**: The practice tasks performed at the laboratory will be assessed according some parameters: personal attitude, task developed, attendance to the lab sessions and the result of the final test to be done once the task is finally delivered.

### Qualification system

- **Learning time**:
  - **Topic 7 Fieldbuses**: 14h
    - Theory classes: 3h
    - Guided activities: 4h
    - Self study: 7h
  - **Topic 8 Real Time protocols**: 14h
    - Theory classes: 3h
    - Guided activities: 4h
    - Self study: 7h

### Description

- **Topic 7 Fieldbuses**: CAN, EIB, PROFIBUS, Ethernet Industrial, PROFINET.

- **Related activities**:
  - Workgroups: 12h
  - Draft. Design and specification of an implementation of an industrial network to a manufacturing, industrial process or control of a facility.

- **Related activities**:
  - Workgroups: 12h
  - Draft. Design and specification of an implementation of an industrial network to a manufacturing, industrial process or control of a facility.

### Regulations for carrying out activities

- As usual exams or tests:
  - They will be held in the classroom.
  - They will last between 1 and 2 h.
  - They include theoretical questions as well as problems to be solved related to the topics.
