Course guide
340636 - FOME-R1P12 - Mechanical Fundamentals

Unit in charge: Vilanova i la Geltrú School of Engineering
Teaching unit: 712 - EM - Department of Mechanical Engineering.
Degree: MASTER'S DEGREE IN AUTOMATIC SYSTEMS AND INDUSTRIAL ELECTRONICS (Syllabus 2012). (Optional subject).
Academic year: 2022  ECTS Credits: 5.0  Languages: Spanish

LECTURER
Coordinating lecturer: Maurici Sivatte
Others: Maurici Sivatte

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:
2. CC09 - Identify the symbols of mechanical systems and obtain the knowledge to determine the number of drives that will allow the desired movement of the system.

Transversal:
1. EFFECTIVE USE OF INFORMATION RESOURCES. Managing the acquisition, structure, analysis and display of information from the own field of specialization. Taking a critical stance with regard to the results obtained.

TEACHING METHODOLOGY

Classes of theory and problems
Lab.

LEARNING OBJECTIVES OF THE SUBJECT

Mechanical systems are the material basis of automation, per therefore an Automàtica i ingieniero in industrial electronics, must understand their movimiento, transmission and causes that generate it. The objective of this course is to convey to students these skills.
This includes:
- Know the symbology of the mechanical systems and obtain the knowledge to be able to determine the number of drives that will make possible the desired movement of the system.
- Know the main elements of machines and know how to analyze their operation.
- Acquire the ability to generate and solve the equations of motion for multi-body mechanical systems.

Total learning time: 45 h
## Characterization of Mechanisms

**Description:**
- Cinematic elements
- Degrees of freedom
- Schematization

**Specific objectives:**
- Introduce students to the symbolism of the mechanical systems and gain the knowledge to determine the number of drives that will allow the desired motion of the system.
- Acquire the concepts of machine, mechanism, kinematic chain element and kinematic pair.
- Identify and classify the pairs of a mechanism.
- Calculate and analyze the degrees of freedom and mobility of a mechanism.
- Understand the meaning of the reference system.
- Training for outlining kinematic mechanisms.
- Mastering the concept of kinematic equivalence.

**Related activities:**
- CLASS THEORY AND PROBLEMS
- LABORATORY PRACTICE
- LEARNING ASSESSMENT

**Full-or-part-time:** 30h
- Theory classes: 8h
- Laboratory classes: 4h
- Self study: 18h

## Elements of Machines

**Description:**
- Transmission Axes. Elements of Union
- Gears and Gear Trains
- Belts and Transmission Chains
- Bearings and Bearings
- Brakes and Clutches
- Springs. Linear guides. Actuators

**Specific objectives:**
- The objective is to understand and know how to analyze the main elements of machines

**Related activities:**
- CLASS THEORY AND PROBLEMS
- LABORATORY PRACTICE
- LEARNING ASSESSMENT

**Full-or-part-time:** 45h
- Theory classes: 16h
- Laboratory classes: 2h
- Self study: 27h
**Space kinematics**

**Description:**
Calculation of velocities in spatial mechanisms.
Calculation of accelerations in spatial mechanisms.

**Specific objectives:**
Understand and calculate the general movement of spatial mechanisms, from a cinematic point of view

**Related activities:**
CLASS THEORY AND PROBLEMS
LABORATORY PRACTICE
LEARNING ASSESSMENT

**Full-or-part-time:** 17h 30m
Theory classes: 4h
Laboratory classes: 3h
Self study: 10h 30m

**Space Dynamics**

**Description:**
Newton's laws. Diagram of the free body.
Resolution of static and dynamic problems

**Specific objectives:**
Identify the causes of movement.
Represent and interpret vectorially the state of exterior solicitations of a spatial mechanical system.
Solve the calculation of the stresses that cause movement in the space mechanical systems.

**Related activities:**
THEORY CLASSES AND PROBLEMS
LABORATORY PRACTICES
LEARNING ASSESSMENT

**Full-or-part-time:** 20h
Theory classes: 2h
Laboratory classes: 6h
Self study: 12h
ACTIVITIES

THEORY CLASSES AND PROBLEMS

Description:
Classroom work

Specific objectives:
Know the symbology of the mechanical systems and obtain the knowledge to be able to determine the number of drives that will make possible the desired movement of the System
Know and calculate the main elements of machines
Acquire the ability to generate and solve the equations of motion for the mechanical space systems

Material:
Notes from the Digital Campus
Transparencies

Full-or-part-time: 28h
Theory classes: 28h

LABORATORY PRACTICE

Description:
Conduct by the student of practical work and mechanical computer simulations

Specific objectives:
Perform model analysis of a mechanism and simulate its movements to solve cinematic and dynamic analysis and design problems

Material:
Computer and software simulation
Mechanical models

Full-or-part-time: 10h
Laboratory classes: 10h

LEARNING ASSESSMENT

Description:
Individual written tests

Specific objectives:
Certify the level of achievement of learning

Full-or-part-time: 7h
Guided activities: 7h

GRADING SYSTEM

The qualification of the subject takes into account all the work done throughout the course.
The final grade (QF) of the subject is obtained from the following expression:
QF = 0.25 x Internship Qualification + 0.35 x Partial Exam + 0.40 x Final Exam.
An individual practice will be carried out that will serve for the qualification of the Practices.
