

## Course guides

# 34951 - NCA - Non-Commutative Algebra

Last modified: 31/05/2020

**Unit in charge:** School of Mathematics and Statistics  
**Teaching unit:** 749 - MAT - Department of Mathematics.

**Degree:** MASTER'S DEGREE IN ADVANCED MATHEMATICS AND MATHEMATICAL ENGINEERING (Syllabus 2010).  
(Optional subject).

**Academic year:** 2020    **ECTS Credits:** 7.5    **Languages:** English

### LECTURER

---

**Coordinating lecturer:** JOSE BURILLO PUIG

**Others:** Primer quadrimestre:  
JOSE BURILLO PUIG - A  
ENRIC VENTURA CAPELL - A

### PRIOR SKILLS

---

The concept of group and subgroup, and the concept of homomorphism. Basic algebraic properties, binary operations and their properties. Equivalence relations and related set-theoretic properties.

### REQUIREMENTS

---

The basic algebra courses from the degree in mathematics.

### DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

---

#### Specific:

1. RESEARCH. Read and understand advanced mathematical papers. Use mathematical research techniques to produce and transmit new results.
2. CALCULUS. Obtain (exact or approximate) solutions for these models with the available resources, including computational means.
3. CRITICAL ASSESSMENT. Discuss the validity, scope and relevance of these solutions; present results and defend conclusions.

#### Transversal:

4. SELF-DIRECTED LEARNING. Detecting gaps in one's knowledge and overcoming them through critical self-appraisal. Choosing the best path for broadening one's knowledge.
5. EFFICIENT ORAL AND WRITTEN COMMUNICATION. Communicating verbally and in writing about learning outcomes, thought-building and decision-making. Taking part in debates about issues related to the own field of specialization.
6. THIRD LANGUAGE. Learning a third language, preferably English, to a degree of oral and written fluency that fits in with the future needs of the graduates of each course.
7. TEAMWORK. Being able to work as a team player, either as a member or as a leader. Contributing to projects pragmatically and responsibly, by reaching commitments in accordance to the resources that are available.
8. EFFECTIVE USE OF INFORMATION RESOURCES. Managing the acquisition, structure, analysis and display of information from the own field of specialization. Taking a critical stance with regard to the results obtained.

### TEACHING METHODOLOGY

---

Classes follow the traditional structure of lecture by the professor, together with the assignment of problems and exercises for the students to solve and present, either in written or in oral form.

## LEARNING OBJECTIVES OF THE SUBJECT

The main goal is to introduce the student into the basic ideas and techniques of non-commutative algebra, to the extent of being able to enroll himself/herself into some initial research project in the area, if there is interest to do so.

Non-commutative algebra plays a significant role in the research panorama in modern mathematics and students of any degree in mathematics have been introduced to it. The main goal of the present topic is to go a bit deeper into this area of mathematics, offering a general but consistent introduction into the topic.

We'll center our attention towards the so-called "Geometric Group Theory", a relatively young and very active research area. This election is done because it allows to go, within a full semester, from the basics of the theory to the description, with a good level of details and context, of some open problems that are currently being object of active research today.

## STUDY LOAD

Type	Hours	Percentage
Hours large group	60,0	32.00
Self study	127,5	68.00

**Total learning time:** 187.5 h

## CONTENTS

### Generalities about infinite groups

**Description:**

The free group: basic definitions.  
Presentations: generators and relations.  
Short exact sequences, direct and semidirect products.  
Free products, amalgams, HNN extensions.

**Full-or-part-time:** 45h

Theory classes: 15h  
Self study : 30h

### Cayley graphs and growth of groups

**Description:**

Cayley graph and growth of a group  
Quasi-isometries, geometric properties  
Growth of groups: polynomial, intermediate, exponential, uniformly exponential  
Gromov theorem

**Full-or-part-time:** 45h

Theory classes: 15h  
Self study : 30h

### Hyperbolic groups

**Description:**

Several definitions of hyperbolicity for groups  
Hyperbolic groups admit a Dehn presentation  
Centralizers in hyperbolic groups  
Characterization of hyperbolic groups as those having linear Dehn function

**Full-or-part-time:** 45h

Theory classes: 15h

Self study : 30h

### Algorithmic problems in groups

**Description:**

The three classical algorithmic problems in group theory: word, conjugacy and isomorphism problems.  
Resolution in simple cases: abelian, free, free-like constructions, residually finite, etc.  
Tietze transformations, an attack to the isomorphism problem  
Some unsolvability results: Novikov, Miller, Mihailova, etc.

**Full-or-part-time:** 45h

Theory classes: 15h

Self study : 30h

## GRADING SYSTEM

Students will have to present in written and/or oral form the exercises assigned along the development of the course.

At the end of the course, each student (individually or in small groups) will choose a topic in Geometric Group Theory of his/her interest (from an offered list, or proposed by himself/herself and validated by the teacher), and write a project on it, preparing both a written document (15-20 pages) and a one-two hours lecture on it.

## BIBLIOGRAPHY

**Basic:**
