480041 - CSCS - Fundamentals of Social Sciences and Approaches to Socio-Environmental Conflicts

Coordinating unit: 250 - ETSECCPB - Barcelona School of Civil Engineering
Teaching unit: 751 - DECA - Department of Civil and Environmental Engineering
Academic year: 2018
Degree: MASTER'S DEGREE IN SUSTAINABILITY SCIENCE AND TECHNOLOGY (Syllabus 2013). (Teaching unit Compulsory)
ECTS credits: 5
Teaching languages: Catalan, Spanish, English

Teaching staff
Coordinator: MIRIAM VILLARES JUNYENT
Others: ELISABET ROCA BOSCH

Opening hours
Timetable: Make an appointment: miriam.villares @ upc.edu

Prior skills

Requirements

Degree competences to which the subject contributes

Basic:
CB6. Knowledge and understanding to provide a basis or opportunity for originality in developing and app ideas, often within a research context.
CB7. That students can apply their knowledge and ability to solve problems in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their field of study.

Specific:
1. The ability to design, develop and apply, in an integrated and coordinated manner, the theories and analytical techniques of the social, economic and Earth sciences, as well as management and research-action techniques and approaches based on sustainability science and technology in the fields of biodiversity and natural resources, the built environment and services, and production systems and information.
2. The ability to coordinate, plan, develop and assess sustainable development programmes and sustainability strategies by identifying and fostering the capacities of participants, and considering the local, national, European and international organisations, strategies and policies involved.
3. The ability to apply knowledge of societies' evolution, their impact on the environment, urban transition and the principal defining characteristics of present-day societies, as well as techniques and lessons related to socio-environmental conflict.

General:
CG03. The ability to analyze, evaluate and synthesize, critically, new and complex ideas and promote, within academic and professional, scientific, technological, social or cultural knowledge society contexts.
CG04. Describe, resolve, prevent and / or alleviate the problems and dysfunctions associated with the processes of
Generic Objective: To provide tools and methods of social analysis to evaluate the effects that plans and projects provoke in the territory and, consequently, on society, its activities and ways of life.

Learning results

At the end of the subject, the student:
Develops and applies concepts, theories and analysis techniques of social sciences and humanities, and of investigation-action techniques with originality, identifying and formulating hypotheses or innovative ideas and subjecting them to
proof of objectivity, coherence and viability.

Knows and understands the characteristics of the social sciences and the humanities that facilitate and frame the management of socio-environmental conflicts, the evolution of societies and their impact on the environment, as well as on urban transition and the main defining features of today's society. Efficiently obtain, treat and analyze statistical and cartographic information referring to demographic phenomena and territorial dynamics.

Has the ability to apply foresight, foresight and retrospection in scenario analysis
