480092 - EI - Industrial Ecology

Coordinating unit: 250 - ETSECCPB - Barcelona School of Civil Engineering
Teaching unit: 713 - EQ - Department of Chemical Engineering
Academic year: 2019
Degree: MASTER'S DEGREE IN SUSTAINABILITY SCIENCE AND TECHNOLOGY (Syllabus 2013). (Teaching unit Optional)
MASTER'S DEGREE IN ENVIRONMENTAL ENGINEERING (Syllabus 2009). (Teaching unit Optional)
MASTER'S DEGREE IN ENVIRONMENTAL ENGINEERING (Syllabus 2014). (Teaching unit Optional)
ECTS credits: 5

Teaching languages: English

Coordinator: JOAN DE PABLO RIBAS

Degree competences to which the subject contributes

Specific:
1. The ability to critically analyse the features and work, business and environmental management methods and strategies of organisations, institutions and key agents for promoting sustainable human development, sustainability and environmental protection, particularly against climate change, by understanding and applying the concepts and theories of business ethics and social responsibility in the fields of engineering and scientific and technical innovation.
2. The capacity to apply the methods and tools used in the identification, information management, planning, management, execution and evaluation of programmes and projects in the fields of sustainability and environmental management to specific problems in a collaborative manner.
3. The ability to design, develop and apply, in an integrated and coordinated manner, the theories and analytical techniques of the social, economic and Earth sciences, as well as management and research-action techniques and approaches based on sustainability science and technology in the fields of biodiversity and natural resources, the built environment and services, and production systems and information.

Transversal:
4. FOREIGN LANGUAGE: Achieving a level of spoken and written proficiency in a foreign language, preferably English, that meets the needs of the profession and the labour market.
480092 - EI - Industrial Ecology

Teaching methodology

The following teaching methods will be used in the development of the course:

Lecture or conference (EXP): Sharing knowledge through lectures by professors or by external guest speakers.
Problem solving and case studies (RP): group decision exercises, debates and group dynamics, with the teacher and students in the classroom; class presentation of an activity carried out individually or in small groups.
Tutorials of practical or theoretical works (TD): to perform an activity in the classroom, or a theoretical or practical exercise, individually or in small groups, with the advice of the teacher.
Carry out a project, activity or work of reduced scope (PR): to carry out, individually or in a group, of a homework assignment of reduced complexity or scope, applying knowledge and presenting results.

Evaluation Activities (EV).

Training activities:

The following training activities will be used in the development of the course:

Face-to-face
Theoretical classes and conferences (CTC): knowledge, understanding and synthesis of contents presented by the lecturer (professor) or by guest speakers.
Practical classes (CP): participation in group exercises, as well as discussions and group dynamics, with the teacher and other students in the classroom.
Theoretical/practical work tutorials (TD): carry out in the class an activity or exercise, theoretical or practical in nature, individually or in small groups, with the advice of the professor.

Remote
Carry out a project, activity or work of reduced scope (PR): to carry out, individually or in a group, of a homework assignment of reduced complexity or scope, applying knowledge and presenting results.
Autonomous study (EA): study or development of the subject individually or in groups, understanding, assimilating, analysing and synthesising knowledge.

Learning objectives of the subject

At the end of this module, the student will:

Knowledge and understanding of the principles of ecology and industrial metabolism and its main applications and implementation methodologies.

Development and application of concepts and theories of industrial ecology to solve sustainability challenges, identifying and formulating hypotheses or innovative ideas.

### Content

#### 1. Concepts, strategies and developments in the field of industrial ecology, and analysis and discussion of their contribution to sustainable development and industrial strategies.

**Degree competences to which the content contributes:**

**Description:**

Describe, explain and analyze the similarities and differences between an ecosystem and an industrial system. Define the concepts of industrial ecology, industrial metabolism and industrial symbiosis.

**Related activities:**

The origins of the Industrial Ecology; IE flow diagram.

#### 2. The Industrial Ecology in the World.

**Degree competences to which the content contributes:**

**Description:**

Advantages and opportunities of IE from North-South perspective. Study of an emblematic case: Kalunborg (Denmark).

**Related activities:**

Case studies of IE in different parts of the world.

#### 3. Activities, strategies and policies: Cleaner Production, Best available techniques, Eco-efficiency, production networks, eco-parks.

**Degree competences to which the content contributes:**

**Description:**

Interactions between the concepts of sustainability in the context of IE, it is described from both policies and specific activities.

**Related activities:**

Waste and solid legislation; BAT's in waste water treatment.

**Degree competences to which the content contributes:**
Description:
Description of different tools for the development of IE

Related activities:
Materials flow analysis
LCA
Planning of activities

A1. THE ORIGINS OF THE INDUSTRIAL ECOLOGY AND IE FLOW DIAGRAM

Description:
Scientific publication analysis.

Support materials:
Scientific publications.

Descriptions of the assignments due and their relation to the assessment:
Report of the IE origins.

A2. INDUSTRIAL ECOLOGY IN THE WORLD

Description:
Case study.

Descriptions of the assignments due and their relation to the assessment:
Presentation of the case by using powerpoint.

A3. SPANISH AND EUROPEAN LEGISLATION

Description:
Analysis of the environmental legislation.

Support materials:
Legislation.

Descriptions of the assignments due and their relation to the assessment:
Presentation and discussion.

A4. APPLICATION OF BAT'S TO INDUSTRIAL WASTEWATER TREATMENT

Description:
BAT to industrial wastewater treatment in different industrial sectors.

Support materials:
BAT's published in Europe.

Descriptions of the assignments due and their relation to the assessment:
Report and presentation.

A5. MASS BALANCE ANALYSIS

Description:
Using the web www.materialflows.net to different countries.

Support materials:
web
**480092 - EI - Industrial Ecology**

**Descriptions of the assignments due and their relation to the assessment:**

**Results**

**A6. LCA**

**Description:**
Life Cycle Analysis Exercise.

**Support materials:**
Exercise

**Descriptions of the assignments due and their relation to the assessment:**

**Results**

**Qualification system**

EV1: Written test (PE). 50%
EV2: Oral test (PO).
EV3: Individual or group coursework (TR). This includes results and reports and their oral presentation. 50%
EV4: Class and laboratory attendance and participation (AP).
EV5: Performance and quality of group work (TG).

**Bibliography**

**Basic:**

**Others resources:**
Provided in class
