820755 - XI - Smart Grids

Coordinating unit: 240 - ETSEIB - Barcelona School of Industrial Engineering
Teaching unit: 709 - EE - Department of Electrical Engineering
Academic year: 2018
Degree: ERASMUS MUNDUS MASTER’S DEGREE IN ENVIRONMENTAL PATHWAYS FOR SUSTAINABLE ENERGY SYSTEMS (Syllabus 2010). (Teaching unit Compulsory)
ERASMUS MUNDUS MASTER’S DEGREE IN ENVIRONMENTAL PATHWAYS FOR SUSTAINABLE ENERGY SYSTEMS (Syllabus 2012). (Teaching unit Optional)
MASTER’S DEGREE IN ENERGY ENGINEERING (Syllabus 2013). (Teaching unit Optional)
ERASMUS MUNDUS MASTER’S DEGREE IN ENVIRONMENTAL PATHWAYS FOR SUSTAINABLE ENERGY SYSTEMS (Syllabus 2010). (Teaching unit Optional)
MASTER’S DEGREE IN ENERGY ENGINEERING (Syllabus 2013). (Teaching unit Optional)
ECTS credits: 5
Teaching languages: English

Teaching staff
Coordinator: Sumper, Andreas
Others: Sumper, Andreas

Opening hours
Timetable: To be fixed at the beginning of the course

Prior skills
Basics on Electric Equipments

Degree competences to which the subject contributes
Specific:
CEMT-3. Assess the economic, social and environmental impact of the production, use and management of energy, with a holistic view of the life cycle of the different systems, and recognise and value the most remarkable developments in the fields of energy efficiency and the rational use of energy.

Teaching methodology
Slides-based lecturing. Invited lectures from the industry.
Some problems will be proposed as assignment.

Learning objectives of the subject
Knowing the basics of power system operation. Knowing the basic properties and components of the Smart Grid. Being able to apply novel techniques and technologies to the power system.
820755 - XI - Smart Grids

Content

Equipment of transmission & distribution systems

**Description:**
Introduction
Classical Grids & Smart Grids
Modeling and Calculus

**Related activities:**
A1: Power Flow Calculation (Matpower)

**Specific objectives:**
Understand and apply the models of the elements of the network, both classic and modern. Integrate the models into a general calculation methodology. Use Matlab-based calculation tools (Matpower).

Smart Grid Technical systems

**Description:**
Smart Grid architecture
Communications and Information
Novel technologies

**Related activities:**
A2: Smart Grid Architecture Modeling (SGAM)

**Specific objectives:**
Understand classical and current regulatory devices for networks. Apply to specific use cases.

Learning time: 22h 30m
Practical classes: 15h
Guided activities: 7h 30m

Learning time: 22h 30m
Theory classes: 7h 30m
Practical classes: 15h
### Qualification system

The end grade will be calculated as a weighted sum of the two assignments with 30% each, the theory exam with 30% and the practical part of the exam with 10%.

### Regulations for carrying out activities

Multiple choice test, calculations

### Bibliography

**Basic:**
