

## Course guide

# 240EQ034 - 240EQ034 - Advanced Design in Chemical Processes

Last modified: 02/06/2022

**Unit in charge:** Barcelona East School of Engineering  
**Teaching unit:** 713 - EQ - Department of Chemical Engineering.

**Degree:** MASTER'S DEGREE IN CHEMICAL ENGINEERING (Syllabus 2012). (Compulsory subject).

**Academic year:** 2022    **ECTS Credits:** 4.5    **Languages:** Catalan, Spanish, English

### LECTURER

---

**Coordinating lecturer:** ANTONIO ESPUÑA CAMARASA

**Others:** Primer quadrimestre:  
ANTONIO ESPUÑA CAMARASA - T10

### PRIOR SKILLS

---

Please check the Spanish version

### REQUIREMENTS

---

Please check the Spanish version

### DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

---

**Specific:**

1. Conceptualize engineering models; apply innovative methods in problem solving and applications suitable for the design, simulation, optimization and control of processes and systems.
3. Designing products, processes, systems and services for the chemical industry as well as the optimization of other already developed technology based on various areas of chemical engineering, understanding of processes and transport phenomena, separation operations and engineering chemical reactions, nuclear, electrochemical and biochemical.
4. The student will be able to analyze the economic feasibility of a chemical engineering project.

**Generical:**

5. Possess independent learning skills to maintain and enhance the competencies of chemical engineering to enable the continued development of their profession.
2. Know how to establish and develop mathematical models using appropriate informatics, scientific and technological basis for the design of new products, processes, systems and services, and for other already developed optimization.

### TEACHING METHODOLOGY

---

Please check the Spanish version

### LEARNING OBJECTIVES OF THE SUBJECT

---

Please check the Spanish version

## STUDY LOAD

Type	Hours	Percentage
Hours small group	13,5	12.00
Self study	72,0	64.00
Hours large group	27,0	24.00

**Total learning time:** 112.5 h

## CONTENTS

### Introduction - Calculation tools - Simulation and optimization

**Full-or-part-time:** 14h

Theory classes: 2h

Practical classes: 2h

Self study : 10h

### Analysis of processes

**Related competencies :**

CGMQ5. Know how to establish and develop mathematical models using appropriate informatics, scientific and technological basis for the design of new products, processes, systems and services, and for other already developed optimization.

CEMQ14. The student will be able to analyze the economic feasibility of a chemical engineering project.

**Full-or-part-time:** 14h

Theory classes: 4h

Practical classes: 2h

Self study : 8h

### Synthesis and optimization of reaction systems

**Description:**

Please check the Spanish version

**Related competencies :**

CGMQ5. Know how to establish and develop mathematical models using appropriate informatics, scientific and technological basis for the design of new products, processes, systems and services, and for other already developed optimization.

CEMQ14. The student will be able to analyze the economic feasibility of a chemical engineering project.

CEMQ2. Designing products, processes, systems and services for the chemical industry as well as the optimization of other already developed technology based on various areas of chemical engineering, understanding of processes and transport phenomena, separation operations and engineering chemical reactions, nuclear, electrochemical and biochemical.

CEMQ3. Conceptualize engineering models; apply innovative methods in problem solving and applications suitable for the design, simulation, optimization and control of processes and systems.

**Full-or-part-time:** 54h

Theory classes: 8h

Practical classes: 24h

Self study : 22h

### Process Intensification

**Description:**

content english

**Full-or-part-time:** 8h

Theory classes: 2h

Self study : 6h

### Global vision: integration of processes

**Related competencies :**

CGMQ5. Know how to establish and develop mathematical models using appropriate informatics, scientific and technological basis for the design of new products, processes, systems and services, and for other already developed optimization.

CEMQ14. The student will be able to analyze the economic feasibility of a chemical engineering project.

CEMQ2. Designing products, processes, systems and services for the chemical industry as well as the optimization of other already developed technology based on various areas of chemical engineering, understanding of processes and transport phenomena, separation operations and engineering chemical reactions, nuclear, electrochemical and biochemical.

CEMQ3. Conceptualize engineering models; apply innovative methods in problem solving and applications suitable for the design, simulation, optimization and control of processes and systems.

**Full-or-part-time:** 15h

Theory classes: 6h

Practical classes: 2h

Self study : 7h

### Managing uncertainty

**Description:**

Please, check the Spanish version

**Full-or-part-time:** 8h

Theory classes: 2h

Laboratory classes: 6h
