Course guide
480092 - EI - Industrial Ecology

Unit in charge: Barcelona School of Civil Engineering
Teaching unit: 713 - EQ - Department of Chemical Engineering.

Degree: MASTER'S DEGREE IN SUSTAINABILITY SCIENCE AND TECHNOLOGY (Syllabus 2013). (Optional subject).
MASTER'S DEGREE IN ENVIRONMENTAL ENGINEERING (Syllabus 2014). (Optional subject).

Academic year: 2023  ECTS Credits: 5.0  Languages: Spanish

OVERVIEW

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:
1. The ability to critically analyse the features and work, business and environmental management methods and strategies of organisations, institutions and key agents for promoting sustainable human development, sustainability and environmental protection, particularly against climate change, by understanding and applying the concepts and theories of business ethics and social responsibility in the fields of engineering and scientific and technical innovation.
2. The capacity to apply the methods and tools used in the identification, information management, planning, management, execution and evaluation of programmes and projects in the fields of sustainability and environmental management to specific problems in a collaborative manner.
3. The ability to design, develop and apply, in an integrated and coordinated manner, the theories and analytical techniques of the social, economic and Earth sciences, as well as management and research-action techniques and approaches based on sustainability science and technology in the fields of biodiversity and natural resources, the built environment and services, and production systems and information.

Transversal:
4. FOREIGN LANGUAGE: Achieving a level of spoken and written proficiency in a foreign language, preferably English, that meets the needs of the profession and the labour market.
TEACHING METHODOLOGY

The following teaching methods will be used in the development of the course:

Lecture or conference (EXP): Sharing knowledge through lectures by professors or by external guest speakers.
Problem solving and case studies (RP): group decision exercises, debates and group dynamics, with the teacher and students in the classroom; class presentation of an activity carried out individually or in small groups.
Tutorials of practical or theoretical works (TD): to perform an activity in the classroom, or a theoretical or practical exercise, individually or in small groups, with the advice of the teacher.
Carry out a project, activity or work of reduced scope (PR): to carry out, individually or in a group, of a homework assignment of reduced complexity or scope, applying knowledge and presenting results
Evaluation Activities (EV).

Training activites:

The following training activities will be used in the development of the course:

Face-to-face
Theoretical classes and conferences (CTC): knowledge, understanding and synthesis of contents presented by the lecturer (professor) or by guest speakers.
Practical classes (CP): participation in group exercises, as well as discussions and group dynamics, with the teacher and other students in the classroom.
Theoretical/practical work tutorials (TD): carry out in the class an activity or exercise, theoretical or practical in nature, individually or in small groups, with the advice of the professor.

Remote
Carry out a project, activity or work of reduced scope (PR): to carry out, individually or in a group, of a homework assignment of reduced complexity or scope, applying knowledge and presenting results.
Autonomous study (EA): study or development of the subject individually or in groups, understanding, assimilating, analysing and synthesising knowledge.

LEARNING OBJECTIVES OF THE SUBJECT

At the end of this module, the student will:
Knowledge and understanding of the principles of ecology and industrial metabolism and its main applications and implementation methodologies.
Development and application of concepts and theories of industrial ecology to solve sustainability challenges, identifying and formulating hypotheses or innovative ideas.

Total learning time: 125 h
## 1. INDUSTRIAL ECOLOGY CONCEPT. COMPARISON WITH CIRCULAR ECONOMY AND INDUSTRIAL SYMBIOSIS. ORIGIN OF IE

**Description:**
1.1 Concept of industrial ecology. 1.2 Comparison with circular economy and industrial symbiosis. 1.3 Natural and industrial ecosystems. 1.4 Origin of EI: history and other theoretical bases

**Full-or-part-time:** 6h  
Theory classes: 3h  
Guided activities: 3h

## 2. INDUSTRIAL ECOLOGY DEVELOPMENT IN THE WORLD

**Description:**
2.1 Map of examples of EI around the world. 2.2 The case of Kalundborg. 2.3 The Devens eco-industrial community. 2.4 The MESVAL project. 2.5 The by-product synergy in Tampico (México). 2.6 IE in agricultural systems. 2.7 Teaching, political, research IE initiatives.

**Full-or-part-time:** 12h  
Theory classes: 4h  
Guided activities: 8h

## 3. IE Methodological tools.

**Description:**
Description of different tools for the development of IE

**Related activities:**
Materials flow analysis  
LCA

**Full-or-part-time:** 1h  
Theory classes: 1h

## 4. EI Strategies, policies and legal systems.

**Description:**
Interactions between the concepts of sustainability in the context of IE, it is described from both policies and specific activities

**Related activities:**
Waste and solid legislation; BAT's in waste water treatment

**Full-or-part-time:** 9h  
Theory classes: 3h  
Guided activities: 6h
# ACTIVITIES

## A1. THE ORIGINS OF THE INDUSTRIAL ECOLOGY AND IE FLOW DIAGRAM

**Description:**
Scientific publication analysis.

**Material:**
Scientific publications.

**Delivery:**
Report of the IE origins.

## A2. INDUSTRIAL ECOLOGY IN THE WORLD

**Description:**
Case study.

**Delivery:**
Presentation of the case by using powerpoint.

## A3. SPANISH AND EUROPEAN LEGISLATION

**Description:**
Analysis of the environmental legislation.

**Material:**
Legislation.

**Delivery:**
Presentation and discussion.

## A4. APPLICATION OF BAT’S TO INDUSTRIAL WASTEWATER TREATMENT

**Description:**
BAT to industrial wastewater treatment in different industrial sectors.

**Material:**
BAT’s published in Europe.

**Delivery:**
Report and presentation.

## A5. MASS BALANCE ANALYSIS

**Description:**
Using the web www.materialflows.net to different countries.

**Material:**
web

**Delivery:**
Results
A6. LCA

Description:
Life Cycle Analysis Exercise.

Material:
Exercise

Delivery:
Results

GRADING SYSTEM

IN-CLASS ACTIVITIES OR HOMEWORK, INDIVIDUAL OR IN-GROUP, SHORT OR LONG, ORAL OR WRITTEN, 80%
FINAL PROJECT 20%
