Last update: 15-06-2018

820031 - SICSB - Information Systems and Communications for Health Services

Coordinating unit: 295 - EEBE - Barcelona East School of Engineering

Teaching unit: 707 - ESAII - Department of Automatic Control

Academic year: 2018

Degree: BACHELOR'S DEGREE IN BIOMEDICAL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
BACHELOR'S DEGREE IN BIOMEDICAL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)

ECTS credits: 6 Teaching languages: Catalan, Spanish

Teaching staff

Coordinator: Jordi Solà Soler

Others: Pedro Gomis Román

Opening hours

Timetable: To check the bulletin board

Prior skills

Basic knowledge of computer programming

Requirements

Having passed the subject of informatics

Degree competences to which the subject contributes

Specific:

2. Identify, understand and apply the principles of information and communication systems to healthcare.

Transversal:

1. EFFECTIVE USE OF INFORMATI0N RESOURCES - Level 3. Planning and using the information necessary for an academic assignment (a final thesis, for example) based on a critical appraisal of the information resources used.

Teaching methodology

The course has two hours per week of theory (large group), 1 hour weekly of problems (large group) and each two weeks two lab hours (small group). In theory class, it will be combined theoretical expositions and exhibitions examples. Problem classes will be participatory and these will be focused on problem solving. In the lab, students must follow the conditions outlined by the teacher. In addition, it is considered hours of self-directed learning focused on a project, in which each working group must work the generic competence making an efficient use of information resources.

Learning objectives of the subject

1. Understanding advanced concepts of computer science and programming. 2. Ability to analyze, design and construction of databases in the health field. 3. Being able to design and configure a data communication system. 4. Ability to solve problems in the field of biomedical engineering using techniques which involve communication systems and databases. 5. Identifying the basic elements of a local area network.

Study load

Total learning time: 150h	Hours large group:	45h	30.00%
	Hours medium group:	0h	0.00%
	Hours small group:	15h	10.00%
	Guided activities:	0h	0.00%
	Self study:	90h	60.00%

Last update: 15-06-2018

820031 - SICSB - Information Systems and Communications for Health Services

Content

(ENG) T1: Introduction to medical informatics

Learning time: 6h

Theory classes: 2h
Self study : 4h

Description:
Introduction to medical informatics. Basic concepts of medical informatics. Information systems in the healthcare environment. Fundamentals of clinical history.

Related activities:
Theory lessons based on examples.

Specific objectives:
-Knowing the informational requeriments in the health sector and undestanding how the medical informatics provides solutions.
-Knowing the basic concepts of medical informatics

(ENG) T2: Design and management of clinical databases

Learning time: 48h

Theory classes: 15h
Laboratory classes: 8h
Self study : 25h

Description:
Modeling databases: Entity / Relation diagrams. Structured Query Language. Applications in healthcare environment.

Related activities:
Theory lessons based on examples. Problem-solving sessions and lab work. Application project.

Specific objectives:
-Defining what is a database, and its application in the context of medical informatics.
-Applying the design methodology of databases and to be able to make a critical interpretation of solutions in healthcare environment.
-Knowing the main sencences of the structured query language and to be able to use it to obtain information from clinical databases.

820031 - SICSB - Information Systems and Communications for Health Services

(ENG) T4: Digital communications and computer networks	Learning time: 48h Theory classes: 16h Laboratory classes: 7h Self study : 25h

Description:
Fundamentals of digital communications. Communication protocols. Local area networks. Interconnection elements.

Related activities:
Theory lessons, problem-solving sessions and lab work. Applied project.

Specific objectives:
-To be able to identify the basic elements of a computer network.
-To be able to analyze and design a local area network.
-Knowing to configure the basic intercommunication elements.

(ENG) T3: Applied project	Learning time: 48h Theory classes: 12h Laboratory classes: 0h Self study : 36h

Description:
Set out an applied project. Required documentation. Work in group. Design and implementation of a an information and communication system in the healthcare environment.

Related activities:
Work in group. Project presentation.

Specific objectives:
- To be able to design and configure an information and communication system.
- To learn how to solve biomedical engineering problems that involve databases and communication systems.

Qualification system

Final grade = 0.5 * Exams + 0.1 * Problems + 0.2 * Lab + 0.2 * Other
where Exams is the average of two partial exams (P1 and P2), Problems scores the proposed activities, and the laboratory includes active learning activities for which the students will make preliminary studies and follow-up assessment reports including the obained results. Other qualifications include a project where generic competence will be developed. The evaluation of the project will follow the following scale:

-The rating of the generic competence of information resources: 25%.
-Quality of content: 75%.

Students who don't pass the subject during the course may do a re-assessment exam (RA). This exam will contain conceptual questions and problems about the whole contents of the subject. It will allow to make up 50% of the final mark, according to the formula max{0.25P1+0.25P2, 0.5RA}.

820031 - SICSB - Information Systems and Communications for Health Services

Regulations for carrying out activities

- The practices are mandatory.
- Repeater students will not receive recognition for any part of the course.
- If some deliverable or some activity is not performed, this will be considered as not scored.
