Specific:
CEMEC-19. Understand and apply graphic engineering techniques.

Transversal:
1. SELF-DIRECTED LEARNING - Level 3. Applying the knowledge gained in completing a task according to its relevance and importance. Deciding how to carry out a task, the amount of time to be devoted to it and the most suitable information sources.

TEACHING METHODOLOGY
In the theory and problems classes we will present the items listed in this subject guide, and we’ll propose issues and little exercises to do in the classroom and as homework.
For explanations will be used: the blackboard, transparencies, PowerPoint, CD-ROM, Flash Drive, Video and Multimedia Systems. Also in class we will show samples of parts, components and small tools related to the subject matter.
The students will have notes and documentation in virtual space ATENEA UPC Campus.
LEARNING OBJECTIVES OF THE SUBJECT

General Objectives
1. - Knowledge of parts manufacturing.
2. - Create the ability to control and verificate products.
3. - Develop the ability to solve problems of metrology and manufacturing processes.
4. - To know the rules to make the parts.
5. - Ability to select the optimal manufacturing process of a piece.

Description:

Specific objectives:
- Know and identify the instruments and measuring machines used to do the metrology of the pieces.
- Know the most important regulations to take into account in order to make measurements in mechanics.
- Apply to the design of a piece everything related to dimensional and geometric adjustments and tolerances, and to relate these concepts to the processes and operations necessary to manufacture a piece.
