

820753 - QSIRX - Quality of Power Supply and Integration of Renewables in the Network

Coordinating unit: 240 - ETSEIB - Barcelona School of Industrial Engineering
Teaching unit: 709 - EE - Department of Electrical Engineering
Academic year: 2019
Degree: MASTER'S DEGREE IN ENERGY ENGINEERING (Syllabus 2013). (Teaching unit Optional)
MASTER'S DEGREE IN ENERGY ENGINEERING (Syllabus 2013). (Teaching unit Optional)
ECTS credits: 5 Teaching languages: Catalan, Spanish, English

Teaching staff

Coordinator: Joan Montaña Puig
Others: Luis Sainz Sopera

Prior skills

- Basic knowledge of electrical systems.
- Solve circuit theory problems.
- Formulate Fourier series.
- Knowledge of electric power systems.

Requirements

Degree competences to which the subject contributes

Specific:

CEMT-1. Understand, describe and analyse, in a clear and comprehensive manner, the entire energy conversion chain, from its status as an energy source to its use as an energy service. They will also be able to identify, describe and analyse the situation and characteristics of the various energy resources and end uses of energy, in their economic, social and environmental dimensions, and to make value judgments.

CEMT-4. Efficiently collect data on renewable energy resources and their statistical treatment and apply knowledge and endpoint criteria in the design and evaluation of technology solutions for using renewable energy resources, for both isolated systems and those connected to networks. They will also be able to recognise and evaluate the newest technological applications in the use of renewable energy resources.

CEMT-6. Employ technical and economic criteria to select the most appropriate electrical equipment for a given application, dimension thermal equipment and facilities, and recognise and evaluate the newest technology applications in the field of production, transport, distribution, storage and use of electric energy.

CEMT-7. Analyse the performance of equipment and facilities in operation to carry out a diagnostic assessment of the use system and establish measures to improve their energy efficiency.

820753 - QSIRX - Quality of Power Supply and Integration of Renewables in the Network

Teaching methodology

- Lecture or seminar (EXP): Teacher and invited lectures.
- Participatory classes (PART): Exercises solved by groups and debates. Presentations of activities (individual or in groups).
- Theoretical and practical work (TD): Solution of exercises or case studies with the assessment of the teacher.
- Short project work (PR): short project or case study where the student will apply the studied contents.
- Project work (PA): in this case the student will work in group. A report with a description of the problem, the proposed solutions and conclusions will be submitted.
- Evaluation activities (EV).

Learning objectives of the subject

- Ath the end of the course the students should be able to:
- Identify the effects of differnt types of disturbances and the most common mitigation techniques.
 - Understand the origin of the harmonics, assess its effects and propose solutions.
 - Understanding the origin, magnitude and effects of transients. Study of mitigation.
 - Know the quality parameters of the voltage supply. Study of variations in voltage and frequency.
 - Identify the origin, modelling and understand the impact of interruptions and voltage sags.
 - knowing the regulatory framework, with special attention to the renewable generation.

Study load

Total learning time: 120h	Hours small group:	30h	25.00%
	Guided activities:	10h	8.33%
	Self study:	80h	66.67%

820753 - QSIRX - Quality of Power Supply and Integration of Renewables in the Network

Content

<p>1. Introduction</p>	<p>Learning time: 13h Theory classes: 3h Self study : 10h</p>
<p>Description: This module describes the concepts of power quality in electrical systems, electromagnetic compatibility, a general classification of the disturbances and the related regulations will be introduced. The emphasis will be on systems with renewable energy sources.</p> <p>Contents: 1.1 Concepts of power quality. 1.2 Types of disturbances in electrical systems. 1.3 Origin and classification of disturbances (EMC). 1.4 Effects of the integration of renewable energy into the grid. 1.5 Current regulatory framework.</p> <p>Related activities: Activity 1 Activity 2</p> <p>Specific objectives: - Understand the concepts related to the power quality. - Know the types and sources of the disturbances affecting the quality of supply. - To characterize the disturbances. - Understand the current regulatory environment.</p>	

820753 - QSIRX - Quality of Power Supply and Integration of Renewables in the Network

<h3>3. Periodic perturbations</h3>	<p>Learning time: 39h 30m</p> <p>Theory classes: 4h 30m Laboratory classes: 5h Guided activities: 5h Self study : 25h</p>
<p>Description: In the second module periodic disturbances will be studied. The origin of harmonics and their effects on the quality of supply and consumption will be considered. Identification and mitigation techniques will be presented. The cases of renewable energy sources integrated to the power network will be exposed.</p> <p>Related activities: Activity 1 Activity 2 Activity 5</p> <p>Specific objectives:</p> <ul style="list-style-type: none"> - To identify the source of harmonics. - To Frequency domain modeling of power systems and evaluate the effects to the power quality - To know the most common mitigation techniques. 	
<h3>3. Non-periodic disturbances</h3>	<p>Learning time: 72h 30m</p> <p>Theory classes: 7h 30m Laboratory classes: 10h Guided activities: 10h Self study : 45h</p>
<p>Description: The third module is devoted to non-periodic disturbances. First, temporary and transient over voltages will be discussed. Over voltages caused by direct and indirect lightning will be evaluated. Lightning effects to wind energy will be presented. Second, voltage and frequency variations will be studied. Finally, interruptions and voltage sags will be exposed. How renewable energy sources affects to the non-periodic disturbances will be described during this module.</p> <p>Related activities: Activity 1 Activity 3 Activity 4 Activity 5</p> <p>Specific objectives:</p> <ul style="list-style-type: none"> -To understand the source, magnitude and effects of transient over voltages. To know the most common mitigation techniques. - To know the quality characteristics of the voltage supply. To study the variations of voltage and frequency. - To identify the origin, model and understand the impact of interruptions voltage sags. 	

820753 - QSIRX - Quality of Power Supply and Integration of Renewables in the Network

Qualification system

- Test (Activity 5): 50 %
- Exercises and works (Activity 1): 25 %
- Laboratory and practices (Activities 2, 3 i 4): 25 %

Regulations for carrying out activities

Rules will be available in Atena
