Skills for a better future
This master’s degree has been designed to enhance your academic background with such skills, thus preparing you for the future. The specialisations will allow you to face real problems in three emerging areas of application: energy-efficient systems, advanced manufacturing systems and healthcare technologies. A research-oriented master’s thesis worth 30 ECTS credits will provide you with the opportunity to collaborate with R&D departments at companies, research centres and hospitals.

Aimed at
Students from all over the world with a solid academic background in engineering, science or mathematics who wish to acquire advanced skills in modern engineering.

Specialisations
These are sample questions that students will be able to address when they are taking the specialisations:

Efficient Systems
- How can I quantify and improve the efficiency and sustainability of my start-up company? Shall I use renewable energies and advanced power management strategies? Could we reduce the environmental impact of our products by designing new materials or implementing circular economy strategies? Are there EU innovation funding options for small and medium-sized enterprises?

Advanced Manufacturing Systems
- How do I implement an advanced fault-monitoring system in my production plant? Can I improve the design of my plant in order to reduce queues and increase the usability of my resources? Should I use autonomous robots and computer vision to increase both safety and speed? Can I integrate mechanical structures and electronic devices using 3D printing technologies?

Healthcare and Biomedical Applications
- Can a wearable device be designed to monitor the physical activity of patients in a hospital? Can a deep-learning system be developed in the context of personalised medicine? Which materials are better suited for an implantable drug-delivery device? How do I protect the intellectual property rights of my invention?

Professional opportunities
Graduates of the master’s degree often find employment in the following:
- R&D centres
- Start-up companies
- Technology management and intellectual property
- Digital transformation projects
- eHealth applications
- Business intelligence
- Industry 4.0 and smart factories
- Sustainability management

Research centres
The master’s thesis is carried out in close collaboration with companies and internationally renowned research and innovation such as the Institute for Bioengineering of Catalonia, the Barcelona Research Center in Multiscale Science and Engineering, the Catalonia Institute for Energy Research, the Sant Joan de Diu Research Institute and the University of California, Irvine.

Engineering software tools
Python, MATLAB, ANSYS, SolidWorks, COMSOL, GaBi, ARENA, among others.

Language
All courses are taught in English.

Where you will study
You will study this master’s degree at the Barcelona East School of Engineering (ELIB) on the Diagonal-Despí Campus, one of the most modern technology campuses in Europe with almost 300 researchers, 3,500 students and 31 official research groups.
Skills for a better future
