Bachelor's degree in Industrial Technologies and Economic Analysis (interuniversity UPC-UPF degree)

The bachelor’s degree in Industrial Technologies and Economic Analysis combines industrial engineering topics and the fundamentals of economics to provide high-level interdisciplinary training that will allow you to adapt to new situations and assimilate the future technological developments that will enable businesses to improve their products and processes.

The degree is taught entirely in English at the Universitat Politècnica de Catalunya (UPC) and Pompeu Fabra University (UPF). It responds to the need for new industrial leaders who have both a thorough understanding of innovation and technology and detailed knowledge of economics. It will give you the opportunity to work on innovation projects in placements at national and international companies, as well as excellent employment prospects. El grado se imparte en la Barcelona School of Industrial Engineering. ETSEIB

GENERAL DETAILS

Duration
4 years

Study load
240 ECTS credits (including the bachelor's thesis). One credit is equivalent to a study load of 25-30 hours.

Delivery
Face-to-face

Timetables
Morning and afternoon

Language of instruction
English

Fees and grants
Approximate fees per academic year: €2,551 (€3,827 for non-EU residents). Consult the public fees system based on income (grants and payment options).

Scholarships
The degree has an own scholarship program for Scholarships for the university system.

ADMISSION

Places
50

Registration and enrolment
What are the requirements to enrol in a bachelor's degree course?

Legalisation of foreign documents
All documents issued in non-EU countries must be legalised and bear the corresponding apostille.

PROFESSIONAL OPPORTUNITIES

Professional opportunities
- Supervision and management of projects, facilities, plants, businesses and technology centres in a range of industrial sectors such as energy; iron and steel; metallurgy; chemicals; robotics; the automotive and rail industries; metal, mechanical and electrical construction; and smart materials, nanotechnology and
bioengineering.
• Calculation and design of products and processes that have an effect on the economic situation, the business sector, the market and business activities.
• Strategic planning, micro- and macroeconomics, quality management and environmental management.
• Research, development and innovation and the analysis of their implications in the management of products, processes and methods.
• Leadership and management of economic environments undergoing change.
• Economics and management of businesses in regulated sectors and network services.
