

Master's degree in Real Estate Development and Management

The **master's degree in Real Estate Development and Management** aims to produce graduates who are able to act as agents of change in the real estate sector, which is historically resistant to change and generates external costs. It aims to provide students with intellectual, professional, human and social instruction, present new concepts and encourage them in a critical attitude to the real estate sector as it is today, taking into account current environmental and social needs.

Graduates will have been trained in planning, developing and managing investments in assets and innovative real estate companies, and will have received a solid grounding in economic, financial, technological and organisational mechanisms, with an emphasis on social welfare and inclusion and environmental conservation. Emphasis will also be placed on emerging business models and public-private participation in solving associated social problems, for example, access to housing and housing rehabilitation.
