

Letter of Recommendation

Alexander S. Tretyakov has been a Master's student of the area "Systems and Communication Devices", the Institute of Engineering Physics and Radio Electronics of Siberian Federal University (SibFU). This program is taught by the Dept. of Info-communications I am heading, being the student's Undergraduate final research paper Advisor as well as.

During his studies both as an undergraduate and Master's student, Alexander has revealed his energetic personality, hard-working, purposeful and curious nature. He has repeatedly contributed to conferences in the field of telecommunications and radio-electronics, as well as an interested listener of others' presentations. Very often, he has completed activities above the planned rate.

Alexander has often demonstrated good administrative abilities and leadership skills; he is capable of launching and streamlining the working process and is excellent in team-management. His team-building is based on individual strong points of the members. He has a good distinctive speech manner. He has initiated sometimes bold strategies in information technologies and even beyond.

He has successfully completed his undergraduate program in the area of "Telecommunications" and defended his final paper with an excellent grade.

I recommend Alexander as an appropriate candidate for international project ERANET Plus exchange program.

Minister Deputy for the Krasnoyarsk Region
Informatization and Communications,
SibFU Dept. of Info-communications Head

Letter of Recommendation

Alexander Tretyakov has successfully completed the undergraduate program in "Telecommunications" and defended his final qualifying work on "Topology departmental telephone systems based on SIP protocol."

He is currently undergoing training in "Systems and Communication Devices" in the Institute of Engineering Physics and Radioelectronics, Siberian Federal University, as a Master's student specializing at the Department of Information Communications, and is in the process of his Master's thesis on the topic: "Analysis of the effectiveness of wireless broadband access in the Krasnoyarsk Territory."

Alexander took a special course "Electrodynamics and Propagation" under my tutoring. During training, Alexander not only showed an increased interest in the subject, but also revealed a high level of general physics knowledge, skills in mathematical packages and up-to-date computer graphics. His good communication skills make it easy for him to adequately formulate the question.

As an undergraduate and Master's student, Alexander has revealed good organizational skills, has been hard-working, purposeful and curious. Several times, he has participated in conferences in the field of radio-physics and radio-electronics, as well as an interested listener of other researchers.

Currently, Alexander is involved in researching electrodynamic parameters of building materials and composites in the microwave range. Alexander has independently developed a scheme of the experiment, has mastered the technique of the measuring equipment, has prepared a number of samples for measurement.

All in all, Alexander Tretyakov can be described as disciplined, executive, active and enterprising person. Both in his training and in the development of the final qualifying work, he has showed a high moral character, was tactful and consistent in his activities. These qualities of character allow him to reach the goals, and therefore I recommend Alexander as an appropriate candidate for international project ERANET Plus exchange program

Explanatory note

Unfortunately, I purely accidentally found out about the ERANET Plus Project and it was too late. I did not have enough time to properly prepare Application Form. I translated all the documents and received all the necessary certificates (besides language certificate) in just a single day. Please consider it.

Sincerely, Alexander Tretyakov.
