9. Motivation and Added Value
*** Describe briefly what you consider to be the added value of an international experience in your training process and the development of your future professional activity.**
(Max. 1000 characters)

Initially, I suppose that data science is a rapidly developing sphere of knowledge which influences the society a lot. New algorithms for big data processing may improve our lives and solve a wide range of problems in medical diagnostics or creation of artificial intelligence, for example. I wish my future occupation would be connected with information technologies, especially with data analysis. This is why I am really interested in data science.
Then, Radboud University provides a possibility to boost my knowledge and to obtain new skills in machine learning, information retrieval and data analysis. They are essentials which data science specialists should be familiar with.
Therefore, I consider the participation in ERANET-Plus project as a perfect opportunity for me to realize my research potential and gain a new experience of international collaboration. I believe that studying at Radboud University could bring the great benefit to my career and influence my future life immensely.
