Letter of Reference

I would like to recommend Nikita Kudriavtsev as a strong candidate for the Eranet Plus exchange program.

I have known Nikita for about two years as his scientific advisor at the Faculty of Computational Mathematics and Cybernetics. This year Nikita will get his Bachelor degree and then start his Master study. Nikita has not only good technical qualification, he also has demonstrated the leadership and communication skills necessary to succeed. He is an intelligent and resourceful student. Nikita has excellent academic progress and high motivation to self-education. He has mature logical thinking and ability to express his thoughts clearly and convincingly both in written language and oral speech. His presentation skills are also quite good. Nikita's work in the "Sparse algebra algorithms" projects demonstrates his research potential. He can state his opinion and support it with appropriate facts.

I highly recommend Nikita as a potential participant of the Master program in Radboud University Nijmegen. In my opinion, he has all qualities which are necessary to success. The participation would help him to widen his horizon in the field of Machine Learning algorithms which is among the fields of interest of our Faculty and would be useful for his future research work.

Sincerely,
Iosif Meyerov, Ph.D., Associate Professor
Scientific advisor
Vice-head of Software Department,
Faculty of Computational Mathematics and Cybernetics

Letter of Reference

Dear Sir/ Madam,

It is an immense pleasure for me to recommend you one of my best students Nikita Kudriavtsev for the Eranet Exchange Program. I have known Nikita Kudriavtsev since he entered the university and I have been supervising his academic achievements for three years. I've known him as a witty and outstanding student with a profound knowledge of the subject Mathematical analysis. He studies hard to master practical skills which will help him in his future career. Moreover he tends to self-education and does a good many optional tasks. While attending my classes he was very active and showed himself as an enthusiastic and energetic student, able to lead discussions.

In addition, he is a monitor of the academic group. This post suits Nikita very much due to his willingness to accept responsibility. Also it reveals his leadership potential and developed communication skills. It should be noticed that he often participates in the social life of the University and helps in organization of different student projects.

In conclusion, I think Nikita is one of the best students I have ever supervised. I have no doubt he will succeed in any challenge the program offers. Nikita deserves to participate in the program, because he will be helpful in achieving program goals on developing and strengthening students' contacts and educating talented specialists. I'm convinced the program will benefit from such a gifted, hardworking and a well-rounded person.

Yours sincerely,
Nikolai Krotov, Ph.D., Associate Professor
Department of Numerical and Functional Analysis
Faculty of Computational Mathematics and Cybernetics

Dera Nikita,

In the Master, students usually take 30 Ecs (e.g., 5 courses), in a semester. You are allowed to take as many courses you want. You have my support. Please note however that your Learning Agreement, consisting in a list of courses you are willing to take, needs to be signed by both coordinators, including your Eranet Plus coordinator in Russia as well.

Kind regards,
Janos Sarbo

Radboud University, FNWI, Computer Science
Erasmus coordinator

Никита Кудрявцев <nikita.yu.kudryavtsev@gmail.com> 05.12.14

кому: Janos

Dear Janos,

Thank you a lot for valuable information! Master's program in Data Science is the most preferable for me. I have already chosen courses and get my Learning Agreement signed by the coordinator. Could I ask you, as a person who knows the details of studying at Faculty of Science, look through and comment on please? If something wrong with it? Thank you in advance, Mr. Sarbo.

Sincerely,
Nikita Kudriavtsev

Janos Sarbo 19.12.14

Dear Nikita, The study plan is o.k. Best, janos > > Dear Janos, > > 2014-12-1...

I strongly believe that theoretical knowledge must be applicable to real life. Becoming a high-level specialist who will contribute to social and scientific development is my main aim.

After having obtained my Master's degree in Computing Science I would like to work in the area of Search engines. Thus I am willing to take study about Data Science as a basis for my Master's thesis. Now my plan is to focus on learning more about Bayesian Networks and Machine Learning. It is this that prompts me to apply for Radboud University Nijmegen which provides a great chance to enhance my academic skills in these fields. Exact sciences have constantly appealed to me. During my studies I have been provided with solid background in such basic fields as mathematics and informatics, also I gained experience in SLA Solver project. Now I am eager to enhance my knowledge by getting foreign academic experience, broad my horizons to write a worthy thesis and then play a part in science development in my country.

Apart from facilitating my professional growth, participation in the Eranet Plus program will definitely help me to learn how to adapt to a new cultural environment and make new friends in another country. I have no doubts that my academic progress and foreign experience could bring me benefit on my return.
